Acknowledgement of Assistance

All manuscripts utilizing data made available through the “Zentralarchiv fuer empirische Sozialforschung“ should acknowledge that fact as well as identify the original collectors of the data. We kindly ask all users to follow some adaptation of the following statement:

The data utilized in this (publication) were documented and made available by the ZENTRALARCHIV FUER EMPIRISCHE SOZIALFORSCHUNG, KOELN. The data for the 'ISSP' were collected by independent institutions in each country (see: principal investigators in the study-description-schemes for each participating country). Neither the original data collectors nor the ZENTRALARCHIV bear any responsibility for the analyses or conclusions presented here

In order to provide funding agencies with essential information about the use of archival resources, and to facilitate the exchange of information about research activities based on the ZENTRALARCHIV's holdings, each user is expected to send two copies of every completed manuscript to the ZENTRALARCHIV.

Please note

All marginals frequencies in this documentation are calculated from

Unweighted data

Please also consider that - especially in the section of the background variables - identical value codes of certain variables may not always have the same meaning for each country. Such country specific differences are documented in this codebook.

An Introduction to the ISSP - the International Social Survey Programme

The ISSP is a continuing annual programme of cross-national collaboration on surveys covering topics which are important for social science research. It brings together existing social science projects and coordinates research goals. Thereby the ISSP adds a cross-national, cross-cultural perspective to the national studies. As of 2004, thirty-nine countries are members of the ISSP.

The founding stones of the ISSP were laid in 1983 when SCPR, London, secured funds from the Nuffield Foundation to hold meetings to further international collaboration between four existing surveys - the General Social Survey, conducted by NORC in the USA, the British Social Attitudes Survey, conducted by SCPR in Great Britain, the Allgemeine Bevölkerungsumfrage der Sozialwissenschaften, conducted by ZUMA in West Germany and the National Social Science Survey, conducted by ANU in Australia. Prior to this, NORC and ZUMA had been collaborating bilaterally on a common set of questions since 1982.

The founding members agreed (1) to jointly develop modules addressing important areas of social science, (2) to field the modules as fifteen-minute supplements to the regular national surveys (or a special survey if necessary), (3) to include an extensive common core of background variables and (4) to make the data available to the social science community as quickly as possible.

Each research organisation funds its own costs, there are no central funds. Merging and archiving of the data into a cross-national data set is performed by the Zentralarchiv fuer Empirische Sozialforschung, University of Cologne. Since 1997, the Zentralarchiv and the Spanish institute ASEP (Análisis Sociológicos Económicos y Políticos) share the task of merging the national data sets.

Since its conception in 1984, 40 nations have participated in the ISSP: the founding four - Australia, Germany, Great Britain and the United States - plus Austria, Bangladesh, Brazil, Bulgaria, Canada, Chile, Cyprus, the Czech Republic, Denmark, Finland, Flanders, France, Hungary, Israel, Ireland, Italy, Japan, Latvia, Mexico, the Netherlands, New Zealand, Norway, the Philippines, Poland, Portugal, Russia, the Slovakian Republic, Slovenia, South Africa, South Korea, Spain, Sweden, Switzerland, Taiwan, Uruguay and Venezuela.

The topics for each ISSP survey are developed over several years by a committee and are pre-tested in various countries. The annual plenary meeting of the ISSP then adopts the final questionnaire. ISSP questions have to be relevant to all countries and must be expressed in an equivalent manner in all languages. The questionnaire is originally drafted in British English and then translated to the languages of the member countries.

The ISSP marks several new departures in the area of cross-national research: (1), the collaboration between members is organised in a stable framework.(2), the ISSP makes cross-national research an integral part of the research agendas of participating countries. (3), by combining a cross-time perspective with a cross-national perspective, two powerful research designs can be used to study societal processes.

ISSP Modules 1985 - 2007**Surveys Already Fielded and Archived**

ISSP 1985	Role of Government I	ZA No. 1490
ISSP 1986	Social Networks and Support Systems	ZA No. 1620
ISSP 1987	Social Inequality I	ZA No. 1680
ISSP 1988	Family and Changing Gender Roles I	ZA No. 1700
ISSP 1989	Work Orientations I	ZA No. 1840
ISSP 1990	Role of Government II	ZA No. 1950
ISSP 1991	Religion I	ZA No. 2150
ISSP 1992	Social Inequality II	ZA No. 2310
ISSP 1993	Environment I	ZA No. 2450
ISSP 1994	Family and Changing Gender Roles II	ZA No. 2620
ISSP 1995	National Identity	ZA No. 2880
ISSP 1996	Role of Government III	ZA No. 2900
ISSP 1997	Work Orientations II	ZA No. 3090
ISSP 1998	Religion II	ZA No. 3190
ISSP 1999	Social Inequality III	ZA No. 3430
ISSP 2000	Environment II	ZA No. 3440
ISSP 2001	Social Relations and Support Systems	ZA No. 3680
ISSP 2002	Family and Changing Gender Roles III	ZA No. 3880

Currently Conducted or Planned Surveys

ISSP 2003	National Identity II
ISSP 2004	Citizenship
ISSP 2005	Work Orientation III
ISSP 2006	Role of Government IV
ISSP 2007	Leisure Time and Sports

Study Descriptions

To differentiate countries in the cross tabulations within this codebook we have decided to use (mainly) the international automobile identification codes:

Australia	AUS
Austria	A
Brazil	BR
Bulgaria	BG
Canada	CDN
Chile	RCH
Cyprus	CY
Czech Republic	CZ
Denmark	DK
Finland	SF
Flanders	FLA
France	F
Germany (West)	D-W
Germany (East)	D-E
Great Britain	GB
Hungary	H
Ireland	IRL
Israel	IL
Italy	I
Japan	J
Latvia	LV
Mexico	MEX
Netherlands	NL
New Zealand	NZ
Northern Ireland	NIRL
Norway	N
Philippines	RP
Poland	PL
Portugal	P
Russia	RUS
Slovakian Republic	SK
Slovenia	SLO
South Korea	
South Africa	ZA
Spain	E
Sweden	S
Switzerland	CH
Taiwan	TWN
Uruguay	
USA	USA

Study Description: Austria

Study title: Social Change in Austria
ISSP-Umfrage 2002

Fieldwork dates: Dec 2003/Feb 2004

Principal investigators: Dr. Max Haller, Dr. Markus Hadler, Mag. Regina Ressler
Institut fuer Soziologie, Karl-Franzens-Universitaet Graz, Austria

Sample type:: Stratified Multistage Clustered Random Sampling

Fieldwork institute: Institute for Empirical Social Research (IFES), Vienna

Fieldwork methods: Face-to-face interviews with trained interviewers

Sample size: 2047

Context of ISSP Questionnaire: Social Survey Austria

Response rates:

3400	A – Total issued (total sample)
197	B – Ineligible (address vacant, wrong ages..)
3203	C – (=A – B) Total eligible (in scope sample)
2047	D – Total ISSP questionnaires received
1156	E – (= C – D; = F + G + H) Total no response
515	F – Refusals (refusing to take part)
641	G – Non-contact (never contacted)
-	H – Other non-response

Language: German

Weighted: Yes

Weighting procedure: A weighting variable was computed, taking into account sex, age group and province of residence.

ISSP Characteristics of National Population: Austria

Each ISSP member is asked to include to the documentation the following information about known characteristics of its national population, from census or the best available estimates from government surveys or other high-quality data-sources:

- Sex distribution of the population
- Age distribution of the population
- Education (years of schooling) of the population
- Employment rate of the population

SOURCE	Census 2001		Statistics Austria 2004	
--------	-------------	--	----------------------------	--

SEX

Male	48,4%			
Female	51,6%			

AGE (groups)

0-14	14,4%			
15-19	5,2%			
20-24	5,0%			
25-29	5,7%			
30-34	7,1%			
35-39	7,5%			
40-44	6,7%			
45-49	5,6%			
50-54	5,5%			
55-59	4,8%			
60-64	4,8%			
65-69	3,5%			
70-74	3,5%			
75-79	3,1%			
80-84	1,6%			
85+	1,5%			

EDUCATION (15 years and older)

		Years of schooling	
University compl. (Universitaet oä.)	6,8%	15	
Secondary compl. (hoehere Schule)	14,6%	12	
Secondary incompl. (Lehre, Fachschule)	45,1%	11	
Primary compl. (Pflichtschule)	33,5%	9	

EMPLOYMENT STATUS (15-59 years)

Employed (Erwerbsquote)			48,8%	
Unemployed			6,9% (annual average 2002)	
Not in labour force			24,7%	

Study Description: Australia

Study title: International Social Science Surveys Australia (IsssA)

Fieldwork dates: December 2001 – November 2002

Principal investigators: Melbourne Institute for Applied Economic and Social Research, The University of Melbourne, Melbourne, Australia

Sample type: Sample random drawn from the compulsory electoral roll; all cases are panel respondents who had taken part in earlier IsssA surveys. Potential respondents were defined as in scope if they were Australian residents, aged 18 or older, able to complete a questionnaire in English, not too ill or infirm, and resident at the address given in the Electoral Register.

Fieldwork Institute: Questionnaire design: Melbourne Institute of Applied Economic and Social Research, University of Melbourne and International Survey Project, Research School of Social Sciences, Australian National University. Fieldwork, data entry and coding: Datacol, Canberra (Malcolm Mearns, principal). Database management and documentation: Melbourne Institute for Applied Economic and Social Research, The University of Melbourne.

Fieldwork methods: IsssA surveys are from simple random samples of Australian citizens drawn by the Electoral Commission from the compulsory electoral roll. They are conducted by mail using a modification of Dillman's (1993) Total Response Method. First, a personally addressed preliminary letter announces the survey, then the survey itself arrives in the post some weeks later. For non-respondents, this was followed by up to four follow-up mailings, one with a fresh copy of the questionnaire, over a 6 to 12 month period. Completion rates run around 60% to 65% in IsssA surveys generally, and about 60% in this survey; this completion rate compares favourably with recent experience in Australia, the USA, and many other industrial nations - for example, the well-regarded International Crime Victim Survey averaged 41% in 14 nations (using identical definitions of scope and completion rate).

A second wave of the survey, based on a new, independent sample, entered the field in December 2002 and is expected to leave the field in late 2003. Cases from this wave are not yet available.

Context of ISSP Questionnaire: The ISSP Social Networks module was included in the International Social Science Survey/Australia (IsssA) 2001/2001, together with the ISSP Family and Changing Gender Roles module.

Sample size: 1352 Family

Response rates:

	A - Total issued
	B – Not eligible (ill, dead, non-English speaking, not at this address)
	C - Total eligible
1352	D - Total ISSP questionnaires received
	E - non-responses (including non-contact; see note above under “sample type”)
	F - Refusals (including questionnaires less than half filled in)
	G - Non-contact (included in “E”)
	H - Other non-response (included in “E”)

1200	A - Total issued (total sample)
47	B - Ineligible (address empty)
1153	C - (= A - B) Total eligible (in-scope sample)
1003	D - Total ISSP questionnaires received
150	E - (= C - D; = F + G + H) Total non-response
56	F - Refusals (refusing to take part)
68	G - Non-contact (never contacted, away for long)
26	H - Other (too sick)

Language: Bulgarian*Weighted:* Yes – by sex

Weighting Procedure: The only variable that has a distribution out of the confidence interval is "SEX". Thus a weighting procedure accounting for this variable is performed. A weighting variable labelled W is computed. The procedure includes calculating of weighting coefficients in order to achieve the distribution General Population (GP). The coefficients are a product of subtraction of GP relative distribution by sample percentage distribution i.e. column B by column C in the following Table1. Thus one unweighted male/female unit from the sample should represent ~ 1.14 male and 0.90 female units when weighting variable is applied.

Deviations from ISSP-questionnaire: No

Study Description: Chile

Study title: Second National Public Opinion Study 2002

Fieldwork dates: December 7th to 25th 2002

Principal

investigators: Carla Lehmann and Paulina Valenzuela of *Centro de Estudios Públicos*

Sample type:

The guiding methodological principle underlying CEP's public opinion surveys is that effective and accurate survey research must be based on a truly representative sample of the universe in question. For CEP's purpose, this universe is made up of Chilean adults 18 years of age and older. Our studies use a probability multistage cluster sample of 1,505 individuals.

The sample is designed in three stages, such that all adult individuals throughout the country have a calculable probability of being included. The June 2002 Estimated Population Projections is consulted to determine the regional population structure of people 18 years of age and older. This makes it possible firstly to establish regional stratification and then each region is stratified by rural and urban zone. Table 1 shows the regional structure of the Chilean population.

Table I
Regional Breakdown of population (%):

<u>Region</u>	% Population 18 years of age and older ¹
I. Tarapacá	2.6 %
II. Antofagasta	3.1 %
III. Atacama	1.8 %
IV. Coquimbo	3.7 %
V. Valparaíso	10.4 %
VI. Libertador Bdo. O'Higgins	5.2 %
VII. Maule	5.9 %
VIII. Bío Bío	12.5 %
IX. La Araucanía	5.6 %
X. Los Lagos	6.9 %
XI. Aisén	0.6 %
XII. Magallanes and Antarctic	1.1 %
XIII. Metropolitan (Santiago)	40.5 %

¹ Source: *Population Estimates. June 30th 2002*, national Institute of Statistics.

Sampling Stages

First stage: The first stage of the sampling process sets the number of completed interviews per cluster at 5; a cluster is defined as a block (manzana) or populated entity (entidad)². The application of 5 interviews per cluster to the total number of interviews targeted in the sample (1,505) yields 301 primary sampling units (PSUs) to be identified in the first stage of sample selection.

The PSUs are proportionally distributed throughout the regions of the country, taking into account the region's contribution to population (both urban and rural), as described in Table II.

Table 2
Number of Clusters per Region

Region	Number of clusters		Total
	Urban	Rural	
I. Tarapacá	8	0	8
II. Antofagasta	9	0	9
III. Atacama	5	1	6
IV. Coquimbo	8	3	11
V. Valparaíso	29	3	32
VI. Libertador Bdo. O'Higgins	11	5	16
VII. Maule	11	6	17
VIII. Bío Bío	31	7	38
IX. La Araucanía	11	6	17
X. Los Lagos	14	7	21
XI. Aisén	1	0	1
XII. Magallanes and Antarctic	3	0	3
XIII. Metropolitan (Santiago)	118	4	122
Total	259	42	301

² Blocks (manzanas) are used in urban areas, while in rural areas the census equivalent is the entity (entidad).

Using the most reliable digital information on hand, i.e. 1991 pre-census data, a cumulative listing of population by province (*provincia*), borough (*comuna*), district (*distrito*), zone (*zona*) and block (*manzana*) was prepared in the urban case; and by province, borough, district, locality (*localidad*) and entity (*entidad*) in the rural case (geographically arranged). This listing has been actualized using the information of Survey of Characterization Socio-economic 2000 (CASEN) realized by Universidad de Chile in the same year.

In both the rural and the urban case a fixed interval is set for each region by dividing the total population for that region by the number of PSUs assigned to it. Within each region, a purely random selection process is followed, such that each individual (as represented by population statistics) has a calculable probability of being selected as the reference point for a PSU.

This is carried out through a computerised, random, proportionate-to-population process to select blocks in the urban areas and entities in the rural areas. A computer program is developed to select the 259 urban blocks and the 42 rural entities for the sample. All the blocks and entities are identified by number and located on a census map.

Second Stage:

The second stage in the sampling process is to select households (dwellings) within PSUs. Selection rules for households within chosen blocks and entities are provided to interviewers, to enable them to select households randomly within each cluster. After taking a census of each selected block and entity, a random walk or systematic sampling³ procedure is followed, whereby every n^{th} dwelling is included in the sample until a total of 5 households are identified.

Third Stage:

The third stage is to select, within each household, a person to be interviewed. Interviewers are instructed to apply a random selection process (random number table) to identify the person to be interviewed.

³ The total number of numbered dwellings was divided by 5 (the number of interviews per cluster); this gave an interval length, such that if it was $43/5 = 8$, starting from the point randomly pre-assigned as the first dwelling, the interviewers went to dwelling $N\frac{1}{4} 9$, then to $N\frac{1}{4} 17$, and so on until 5 interviews were completed.

Other Important Aspects in the CEP Sample Design:

In the second and third stages, the interviewer has to make a minimum of three attempts on three different days to try to reach the original house or person to be interviewed. In these attempts the interviewer must deliver a letter signed by the CEP director explaining the nature of CEP and the aims of the study.

If the original household or person finally cannot be contacted, they are replaced. The rules for replacement are as follows:

A. Blocks and Entities

The replacement of a block or entity will occur only in the following situations:

- 1) Vacant lots that could not be detected prior to sample selection
- 2) Areas which are almost inaccessible
- 3) Entities and/or blocks intended basically for commercial use
- 4) Parks or stadiums
- 5) Areas belonging to the armed forces

Blocks and entities are randomly replaced: the original selection is replaced with the one whose identification number comes immediately before that of the original. If this is not successful, the block/entity with the identification number immediately following the original selection is taken

B. Households

Failed dwellings are accounted for as follows:

- 1) by outright refusal to receive the interviewer, even having received the letter from the CEP director.
- 2) by the absence of occupants at a house after three visits on three different days (vacations or other reasons).
- 3) The house is unoccupied.
- 4) access denied (condominiums or buildings with security guards)
- 5) other special cases (foreigners with whom it is impossible to communicate, etc.)

Each failed dwelling is randomly replaced by another one from the same block/entity. The replacement interval is defined as $(k-1)$, where k = the original selection interval. Starting from the last house originally selected, the interval $(k-1)$ is added to select the first replacement house, and so on. The fieldwork treatment of replacement houses as regards the number of repeat visits is the same as for the original houses.

C. Individuals

Individuals are replaced under the following circumstances:

- 1) when the person selected refuses to answer the questionnaire, even after receiving the letter from the CEP director.
- 2) when the person selected cannot be located after three attempts on three different days, or will be away for a period longer than the duration of fieldwork.
- 3) the person offers to respond on a date long after the closing date of the field work.
- 4) individuals with serious physical or psychological handicaps which prevent them from responding (mentally handicapped, deaf and dumb, etc.)
- 5) the individual is physically and psychologically fit, but is ill, in bed and does not want, or is unable to respond to the survey.
- 6) the selected individual is a foreigner with less than 5 years in the country (unable to vote).
- 7) the person starts to answer but he/she does not want to finish the interview.
- 8) other specific cases.

In replacing individuals, the dwelling is replaced according to the rules explained above, and a random selection process chooses an individual from the new household.

It is important to bear in mind that, by using these replacement rules, the sample size achieved is always very close to 1505 (issued sample size).

Fieldwork methods: The surveys are carried out through personal interview

Context of ISSP questionnaire: The Family 2002 module of the ISSP was carried out in conjunction with 29 questions relating to Chilean political, economic and social attitudes and tendencies.

The questionnaire was structured as follows: firstly, the 29 questions mentioned above, the complete Family ISSP module, and, finally, demographic variables.

Sample size: The sample size finally achieved was 1,505 interviews.

Response rates: As was explained above in the section “Sample type”, the sampling method used by CEP involves the random replacement of those blocks/entities, dwellings or individuals, who for the reasons described above cannot in the end be contacted. Accordingly, keeping this in mind and using the method for counting the response rate established by the ISSP, we have that:

A= 1,505= Issue sample

B= 0 = Ineligible

A-B = 1,505 = C = Total eligible

D= 1,505 = Sample achieved

E= C – D = 0

Response rate = A/D = 1505/1505 = 100%

Non- response rate = 0/1505= 0.0%

However, for the type of sampling used by CEP, these data are not real. CEP uses the following method for calculating the response rate.

Let A = number of original interviews achieved (not replaced) = 1,282

Let B = number of non-original interviews achieved (replaced) = 223

Let C = number of questionnaires received = A + B = (total sample) = 1,505

$B = D1 + E1 + F1 + D2 + E2 + G + F2 = 223$

where :

D1 = number of interviews replaced due rejection of household = 93

E1 = number of interviews replaced due to no contact in house (empty house + nobody comes to the door) = 51

F1 = number of interviews replaced for other household reasons = 9

D2 = number of interviews replaced due to individual rejection = 30

E2 = number of interviews replaced due to failure to make contact with selected individual = 24

G = number of interviews replaced due to physical or psychological impediment of selected individual = 12

F2 = number of interviews replaced for other individual reasons = 4

No-response rate = number of non-original interviews achieved (replaced) / total number of interviews (replaced + original)
= B / C = 223 / 1,505 = 14.8%

Language: The language used in the interview is Spanish

Weighting: The data submitted are weighted.

Weighting procedure: A weighting procedure is applied in order to correct for distortions in the representativeness of the sample as regards three variables of interest: Gender, Age, (grouped in five categories: 18-24 years, 25-34, 35-44, 45-54, 55 or older) and Urbanity (classification of place of residence as urban or rural). This makes it possible to obtain a sample with characteristics similar to those of the population. The weights are constructed by calculating the quotient between the expected distribution and that observed in the cross between Urbanity, Gender and Age. The expected distribution is obtained from population projections provided by the National Institute of Statistics. The result of the weighting slightly corrects for problems of under- and over-representation among certain specific groups of the population.

Known Systematic Properties in Sample: The sample design described above has been used in the last 15 surveys and has given good results, so it can be stated that it does not have properties that might be causing some type of bias in the results.

Deviations from ISSP questionnaire: The questionnaire was translated as closely as possible from English to Spanish, maintaining the meaning and significance of each sentence and word.

Some general comments:

- In questions V36 and V37 the codes “None, no hour” is 996 and “NA” is 999.
- In questions V44 to V47 we added the code “No answer” as 9.
- In questions V48 to V51 the code “NEVER” was not included.
- In question V53 we added the code “Doesn’t apply, no job” (0)
- In questions V56 to V59 we added the code “NAP” (0)
- In question V66 its label was modified for “...Kids 5 to 17 yrs”. In question V67 its label was modified for “...Up to 4”
- Question V70 was renamed because our question is about years of schooling. It has new name, RCH_V70, like EDUCYRS.

Variable labels rch_v70 ‘Spouse degree: years of schooling’.

Value labels rch_v70

0 ‘No formal schooling’

99 ‘Na’

98 ‘NAP’

DEMOGRAPHICS VARIABLES:

- MARITAL: The code 3 is “ANULADO”: In Chile we don’t have divorce.
- UNION: The code 2 was not included.
- INCOME and RINCOME: In these questions, incomes were measured like monthly net – income.
- ISCO88 and SPISCO88: The answers were coded with 4 digit when it was possible.

- RCH_PRTY: The code 7 was omitted, because this party doesn't exist now. The codes 9 and 94 were not included. The new codes are:

VALUE LABELS RCH_PRTY

01 'Christian Democratic'
02 'Independent Democratic'
03 'Communist Party of Chile'
04 'National Renewal Party'
05 'Chilean Socialist Party'
06 'Radical Social Democratic'
07 'Democracy Party PPD'
08 'Other Party'
09 'No party, no preference'
88 'Don't know'
99 'NA'

- URBRURAL: It was added new codes, 6 for "Urban, RP total urban" and 7 for "Rural, RP total rural".

489	F – Refusals (refusing to take part)
325	G – Non-contact (never contacted)
131	H – Other non-response

Language: Czech*Weighted:* Yes*Weighting procedure:* Total weight is constructed from:
1. design weights based on proportion of household sizes
2. post - stratification weights based on regions sex, education, age, economical activity, and size of the community.
The weights were derived from data of the Czech Statistical Office (Census 2001). Method: raking based on log linear modelling.*Known systematic properties of the sample:* Due to response differences the basic socio-demographic characteristics – sex and level of education – are significantly different from the known population characteristics. The problem was corrected by the post-stratification weights (see above).

Deviations from ISSP-questionnaire V71: Additional compulsory background question “number of hours weekly worked by spouse/partner” was not included into the questionnaire. It happened by mistake.

Sample type: Sampling-procedure: A representative sample (simple random sample)

was drawn from the *Central Population Register (CPR)* – which is national register of all Danish citizens - from which respondent's name and address were identified. Thus, the sampled unit was “named individuals”. No stratification, clustering etc. was employed. The fieldwork method was postal survey (self-completion). One reminder was send out to respondents who had not returned the questionnaire. After this telephone interviews were attempted. If respondents were not meet, they were contacted at least five times (in practice the average number of calls were 8) before given up as “not meet”. In total 81,4 pct. of the interviews where completed by mail and 18,6 pct were completed as telephone interviews (cf.MODE-variable). No substitutions were permitted at any stage of the selection process or during the fieldwork.

The question in the module was asked in the prescribed order.

Sample size: Issued: 2100
Achieved: 1379

Response rates: The response rate is calculated to 66,2 percent.
Full productive interviews / (Issued names – (respondents moved, no forwarding address + respondents deceased)):
 $1379 / (2100 - (13 + 5)) \times 100 = 66,2$ percent.

Description	(N)
Issued names	2100
Selected respondent moved, no forwarding address	13
Selected respondent too sick/incapacitated to participate	78
Selected respondent deceased	5
Personal refusal by selected respondent	374
Other type of unproductive reaction	251
Full productive interviews	1379

Principal investigators: Raimo Blom, University of Tampere
Harri Melin, University of Tampere

Sample type: Target population: household population aged 15 to 74. Sampling design: a systematic random sample of individuals.
Sampling frame: population register, sorting order: domicile code and birth date. Stratification: implicit geographic stratification. No clustering.

Fieldwork Institute: Statistics Finland, Helsinki

Fieldwork methods: Postal (both direction), self-completion, paper and pencil

Sample size: Issued: 2498

<i>Response rates:</i>	A – Total issued	2498
	B – Ineligible (address unknown or living abroad	10
	C – Total eligible	2488
	D – Total ISSP questionnaires received	1353
	E – Total non-response	1135
	F – Refusals	15
	G – Non-contact	-
	H – Other non-response	1120

Language: Questionnaires in Finnish and in Swedish. Information on language from population registers. Finnish (2360; 94,5% of total sample) and Swedish (138; 5,5% of total sample)

Weighted: Weight variables are included in the data-set. Data is unweighted.

Weighting procedure: The design of the survey was systematic sampling. In order to improve the efficiency of estimation and to reduce bias due to non-response a calibration method was used for the creation of the weights.

The following marginal distributions of the population were used: 1) gender (male, female), 2) age classes (15-24, 25-34, ..., 65-74), 3) NUTS2 regions with following modifications: the Greater Helsinki Area was dealt as a separate region whereas the Autonomous Territory of Åland Islands were combined with Southern Finland, 4) type of community (urban – rural). There are two weights available for calculations: 1) a weight that expands the results to the population level (the sum of the weights is the size of the population) and 2) a weight that doesn't have the expansion property (the mean of the weights is 1 and the sum of the weights is the number of accepted responses, i.e. the size of the data). Both of the weights are based on the same calibration process, only the scale differs.

Known systematic properties of the sample:

Sampling frame is updated and covers total population. A cross-sectional sample does not contain attrition by definition.

After having used our standard sampling procedures for over 20 years we have not encountered any bias due to using systematic sampling. Design effect of the sampling procedure ≤ 1 by definition.

Study Description: Flanders (Belgium)

Study title: Sociaal – culturele verschuivingen in Vlaanderen 2002 (Social cultural changes in Flanders 2002)

Fieldwork dates: End of March – beginning of July 2002

Principal investigators: Ministerie van de Vlaamse Gemeenschap (MVG), Administratie Planning en Statistiek (APS) (dr. Ann Carton, Hendrik Van Geel)
Supported by a scientific committee: Prof.dr. Jaak Billiet (K.U. Leuven), Prof.dr. Geert Loosveldt (K.U. Leuven), Prof.dr. Hans Waeghe (UGent), Prof.dr. Marc Swyngedouw (K.U. Leuven/K.U. Brussel), Prof.dr. Mark Elchardus (VUBrussel), Prof. dr. Geert Molenberghs (LUC), Prof.dr. Jef Breda (UFSIA)

Sample type: Two-stage random sampling procedure
Using the National Register 4*1500 respondents (18-85 years with Belgian nationality) (secondary sampling units) were randomly selected within randomly selected municipalities in Flanders (146 clusters of 10 respondents each) and Brussels (8 clusters of 5 respondents each) (primary sampling units).

The sample is randomly divided into sets of 4*10 units / 4*5 units (1 effective list of addresses and 3 lists of substitute addresses).

Interviewers start with the effective list of addresses. They receive substitute addresses for not realized addresses after completing and sending back a contact form with full description of the reason for not realizing an address (one substitute address for each non realized address)

The National Register is a national governmental institution that stores data on all residents in Belgium: name, address, gender, data of birth, nationality, and composition of the family.

Fieldwork Institute: Significant / GFK – Heverlee

Fieldwork methods:

- Survey social-cultural changes in Flanders including the standard background variables: PAPI Face-to-face interviews with trained interviewers (1 day training).
- ISSP-module: drop-off questionnaire arrives with interviewer, self-completion by respondent and mailed back by respondent to MVG – APS. Follow-up of drop-off questionnaire by MVG – APS.

Sample size: N=1477 respondents in Survey social-cultural changes in Flanders of which 1360 respondents completed the drop-off questionnaire.

<i>Response rates:</i>	2125	A - Total issued (total sample)
	171	B - Ineligible (address vacant, wrong ages, ...)
	1954	C - (= A - B) Total eligible (in scope sample)
	1360	D - Total ISSP questionnaires received
	594	E - (= C - D; = F + G + H) Total non-response
	386	F - Refusals (refusing to take part)
	125	G - Non-contact (never contacted)
	83	H - Other non-response

B=deceased (n=7) + moved-out (n=54) + language barrier (n=43) + disabled, demented (67)

F=refusal face to face interview (n=269) + face to face interview but no drop-off (n=117)

H=other non-response (n=59) + interviewer fraud (n=24)

Language: Dutch

Weighted: Yes

Weighting procedure: For the realized total sample a weighting variable was computed, taking into account sex, age group and level of education (Nationaal Instituut voor de statistiek, Enquete naar de arbeidskrachten, Flanders, 2001)

Known systematic properties of the sample:

Realized drop-off versus realized total sample:

- The realized drop-off sample (N=1360) is representative for the realized total sample (N=1477) for the variables age, gender, and level of education.

Realized drop-off versus population:

- There is a slight under representation of 18-44 years old men and a slight over representation of 45-85 years old men. There is a slight under representation of 18-34 years old women and a slight over representation of 35-54 years old and 75-85 years old women.
- There is under representation of lower educated people (primary education or no diploma) and an over representation of higher educated people (non-university higher education)

Deviations from ISSP questionnaire: Following standard background variables were not included in the survey:

PARTY_LR Party affiliation – left-right

(Not asked but coded in a 5-point left – right scheme by data producers)

nat_PRTY Party affiliation – Country-specific

VOTE_LE Vote last general election: Yes/no

ISSP Methods Report on the German Study (forthcoming)

Weighting for an all German representative sample in ISSP 2002

	Mikrozensus 2001* (in thousand)			ISSP 2002		
	West (Nw)	East (No)	Total (N)	West (nw)	East (no)	Total (n)
Persons in private households, 18 years and older	53.878	12.456	66.334	936	431	1367

* figures provided by the German Federal Statistical Office

$$\text{- West} \quad \frac{n}{nw} \quad \times \quad \frac{Nw}{N} \quad = \quad \frac{1367}{936} \quad \times \quad \frac{53878}{66334} \quad = \quad 1,18623$$

$$\text{- East} \quad \frac{n}{no} \quad \times \quad \frac{No}{N} \quad = \quad \frac{1367}{431} \quad \times \quad \frac{12456}{66334} \quad = \quad 0,59557$$

Calculation of ISSP weights follows procedures described in ALLBUS methods reports for the ALLBUS, see for example: Achim Koch, Martina Wasmer, Janet Harkness, Evi Scholz (2001), ZUMA-Methodenbericht 2001/05: Konzeption und Durchführung der "Allgemeinen Bevölkerungsumfrage der Sozialwissenschaften) (ALLBUS) 2000; see page following:

[http://www.gesis.org/Publikationen/Berichte/ZUMA Methodenberichte/documents/pdfs/tb01_05.pdf](http://www.gesis.org/Publikationen/Berichte/ZUMA_Methodenberichte/documents/pdfs/tb01_05.pdf)

Study Description: Great Britain*Study title:* British Social Attitudes 2002*Fieldwork dates:* June to November 2002*Principal investigators:* National Centre for Social Research.*Sample type:* Clustered random sample: addresses were selected with equal probability in a stratified clustered design. One person aged 18+ was interviewed per address.*Fieldwork Institute:* National Centre for Social Research*Fieldwork methods:* The ISSP module is implemented as a self-completion questionnaire, completed by the respondent after the main face-to-face interview and collected by the interviewer.*Sample size:* 1960*Response rates:*

4133	A - Total issued (total sample)
369	B – Ineligible (address vacant, wrong ages,...)
3764	C – (=A – B) Total eligible (in scope sample)
1960	D - Total ISSP questionnaires received
1804	E – (=C – D; = F + G + H) Total non-response
1060	F - Refusals (refusing to take part)
352	Face-to-face interview but no self-completion
187	G - Non-contact (never contacted)
205	H - Other non-response

Language: English*Weighted:* Yes*Weighting procedure:* Addresses were selected with equal probability (except in Scotland where allowance was made for MOI – see below) but only one person interviewed at each address. Therefore weights need to be applied to correct for different number of adults at each address. The weights are calculated by the following formula:

$$\text{Weight} = \frac{\text{(Number of households at the address* number of adults in selected household)}}{\text{MOI}}$$

Weight = $\frac{\text{MOI}}{\text{MOI}}$

Where MOI is the Multiple Output Indicator (MOI>1 indicates more than one household at the address).

Very large weights were capped and the weights were scaled to make the weighted sample size equal to the unweighted sample size.

- Known systemic properties of the sample:* Sample excludes Scotland north of the Great Glen.
- Deviations from ISSP Questionnaire:* V69 and TOPBOT are not available.
The following variables were collected only if the respondent was not economically active/retired and the spouse partner was economically active/retired: SPISCO88, SPWRKTYP.
- Publications:* Park, A. et al (eds) (2003 forthcoming), *British Social Attitudes: the 20th Report-Continuity and change over two decades*, London: Sage, especially the following chapter: „A woman’s place...Employment and family life for men and women” by Crompton, R., Brockmann, M and Wiggins, R.D.

Study Description: Hungary*Study title:* Family and Gender Roles*Fieldwork dates:* 3. – 12. December 2003*Principal investigators:* Demographic Research Institute, Central Statistical Office, Hungary

Sample type: Random probability sample being representative for those aged of 18 who have permanent private address in Hungary. If someone is not a Hungarian citizen, but has a permanent private address in the country, had the same probability to be in the sample. Those living in institutional addresses were not in the sampling frame. The sample selection procedure consisted of three stages:

1. Random selection of regions and
2. Random selection of settlements within the regions
3. Random selection of the respondents living on the selected settlement. Names and addresses were taken from the Central Register of the Election Office of the Ministry of Internal Affairs

Fieldwork methods: TARKI Social Research Centre, Budapest*Fieldwork methods:* Face-to-face with show cards*Sample size:* 1023*Response rates:*

1728	A - Total issued (total sample)
41	B – Ineligible (address vacant, wrong ages,...)
1687	C – (=A – B) Total eligible (in scope sample)
1023	D - Total ISSP questionnaires received
664	E – (=C – D; = F + G + H) Total non-response
264	F - Refusals (refusing to take part)
127	G – Non-contact (never contacted)
84	No contact (at address)
111	Respondent away
15	Respondent sick
63	H - Other non-response

Language: Hungarian*Weighted:* Yes*Weighting procedure:* Distributions from the survey data were compared to the Census along four key indicators (gender, age-cohort, highest level of education, type of residence). In order to correct sampling / response errors a weighting

factor was constructed to eliminate statistically significant differences between the two. The weight of each cases was computed as $WEIGHT=(F/f)*(n/N)$; where N=respondents above the age of 18 according to the Hungarian Central Statistical Office; n=1023; F=frequency of the population category the case belongs to; f= the parallel frequency in the 2002 ISSP module.

Known systemic properties of the sample:

When comparing the demographic distribution of the achieved sample to that of the Census, men, respondents aged between 18-39, and respondents with primary level of education were underrepresented; while women, respondents aged over 60, and respondents with tertiary level of education were overrepresented. This was corrected by weighting.

Deviations from ISSP Questionnaire:

Deviations from ISSP questionnaire:

- In the Hungarian questionnaire, the 1 to 5 scales were reversed, 5 indicating full agreement and 1 indicating total lack of agreement. This difference was then taken into account (and recoded) when the English standard was created.
- To remain consistent with the 1994 mode of wording, in questions v30 to v35 response categories were given in the following way: Always me / Usually me / Me and my partner equally / Usually my partner / Always my partner. In the coding procedure, variables similar to the ISSP standard were computed.
- For questions to variables v56 – v63, instead of the standard category “stayed at home” more options were offered. These were: worked at home / stayed at home because did not wish to work / stayed at home because could not find an appropriate job / stayed at home for other reason. When creating the English standard file these four categories were coded into one (code 3 = stayed at home).

Study Description: Ireland

Study title: Family and Changing Gender Roles II 2002

Fieldwork dates: 12.12.2001-28.02.2002

Principal investigators: The Economic and Social Research Institute

Sample type: A three-stage clustered sampling approach was used for sample selection. At the first stage a random sample of PSU's was selected. At the second, a random sample of households was selected. At the third a random person within household was selected. The sampling frame used for this study was the most up-to-date national electoral register. Electors are recorded in the electoral list in so-called Polling Books. For sample selection purposes these polling books are reconstituted into area units known as District Electoral Divisions. There is a total of 3,400 District Electoral Divisions (DEDs) in Ireland. These DEDs are the most spatially disaggregated area units in Ireland for which census data are available and are the standard PSU building block for random sample selection. Once the Electoral Register has been re-structured into the District Electoral Division format a random sample of 220 PSUs was selected. Each PSU was made up of the District Electoral Division or aggregate thereof using a minimum population threshold criteria. These PSUs constituted the first stage of sample selection. Once the PSU was selected, a systematic sample of addresses from within each was identified. When the addresses were identified the interviewer called at each and identified the target respondent using the next birthday rule.

Fieldwork methods: Face-to-face

Sample size: 1256

Response rates:

2224	A - Total issued (total sample)
127	B – Ineligible (address vacant, wrong ages,...)
2097	C – (=A – B) Total eligible (in scope sample)
1256	D - Total ISSP questionnaires received
856	E – (=C – D; = F + G + H) Total non-response
490	F - Refusals (refusing to take part)
351	G - Non-contact (never contacted)
	H - Other non-response

Language: English

Weighted: Yes

Weighting procedure: The weights were constructed using a minimum information loss routine with marginal constraints based on age; gender; Principal Economic Status; region; marital status; level of educational attainment; household size (number of persons aged 18 years and over). As described above at Q34, the number of persons aged 18 years or over resident in the household is a critical dimension of the re-weighting schema as this controls for the design effects resulting from pps for household selection which results from using the Electoral Register as a population frame.

Study Description: Israel*Study title:* Family and Gender Roles*Fieldwork dates:* 15.04.2002 – 30.06.2002*Principal investigators:* Noah Lewin-Epstein*Fieldwork Institute:* B.I.and Lucille Cohen

Study Description: Japan

Study title: Family and Changing Gender Roles

Fieldwork dates: 16th – 24th November, 2002

Principal investigators: ARAMAKI Hiroshi, KOBAYASHI Toshiyuki, ONODERA, Noriko(NHK)

Sample type: We used a two-stage stratified random sample of Japanese 16 or older. First, urban and rural areas are divided into a number of groups (strata) based on similarities in local features and industrial structures. From each of those groups, streets and village-sections are again grouped together to form sampling units. From among such sampling units, 150 survey spots are selected at random. Then, from the Basic Resident Registers for these spots, 12 sample individuals aged 16 or over are selected according to a fixed random number.

Fieldwork methods: Face to Face

Sample size: Issued 1,800, achieved 1,132

Response rates:

1800	A - Total issued (total sample)
118	B - Ineligible 18 respondents were not found 95 respondents moved somewhere else 5 respondents died
1682	C - (= A-B) Total eligible
1132	D - Total ISSP questionnaires received
550	E - (=C-D; =F + G+H) Total non-response
253	F – Refusals
283	G - Non-contact 24 respondents had not lived at home for one year or more 58 respondents had not lived at home for 10-364 days 39 respondents had not lived at home for 9 days or less 42 respondents came home at midnight 99 respondents were not at home temporarily 21 respondents were ill in bed at home
14	H - Other

Language: Japanese

Weighted: No

Deviations from ISSP Questions: COHAB, SPISCO88 and ETHNIC are not included.

Study Description: Mexico

Study title: Family (ISSP 2002 Module)

Fieldwork dates: March 7 – March 16, 2003

Principal investigators: Federico Curiel, Héctor Mireles and Jorge Godínez, Institute of Marketing and Opinion.

Sample type: The design of the sample considered the following points:
The representative scenario is the Mexican Republic. The study Universe is the population bigger than 18 years.
The sample frame was elaborated with a design of Stratified Random Sampling of Three stages with units of first and second stage of different size.
The primary units of sampling are the municipalities, the secondary units are the AGEBs in the urban case and the localities in the rural case and the units of third stage are the inhabitants of the housings. The AGEB means Basic Geo-Statistic Area, they are perfectly defined geographical units and with inhabitants group with known demographic and economic variables, its delimitation is smaller than the municipality and it facilitates studies for clusters.

PARTITION OF THE UNIVERSE

The Mexican Republic was stratified through 3 processes, the first one in regions and they are presented in the following frame (The assignment of cases was carried out with the method of proportional assignment):

Region	States in sample	Cases
Southeast	Campeche, Chiapas, Tabasco and Yucatan	215
West	Colima, Guanajuato, Jalisco, Michoacan, Nayarit and Zacatecas	429
Northwest	Baja California and Sonora	150
Northeast	Coahuila, Nuevo Leon and Tamaulipas	211
Center/East	Distrito Federal, Guerrero, Hidalgo, Mexico, Puebla, Tlaxcala and Veracruz	807
Total		1,812

In the following stratification process, it was carried out according to the Urban and Rural:

Region	Urban	Rural	Cases
Southeast	119	96	215
West	307	122	429
Northwest	128	22	150
Northeast	176	35	211
Center/East	626	181	807
Total	1356	456	1812

The third stratification process went in agreement to the municipalities,

these grouped according to population's size and the cases applied for each stratum they were made with proportional assignment.

STAGES OF SELECTION

First Stage

Defined the cases by stratum, the municipalities in a random way were selected assigning same probability to each one of them. The municipalities selected in the Mexican Republic were 51.

Second Stage

Later on the AGEBS in the urban case and the localities in the rural case was selected in a random way assigning same probability to each one of them, the quantity of secondary units per region is presented in the following frame:

Region	AGEBS	Towns	Total
Southeast	7	5	12
West	16	7	23
Northwest	7	2	9
Northeast	9	2	11
Center/East	33	10	43
Total	72	26	98

Third Stage

Located the AGEB or the locality, we proceeded to select the housings under the technique of systematic jump with random outburst, the jump was defined dividing the number of housings that exist in the units of third stage among the number of interviews to carry out, the outburst was random and oscillated between 1 and the calculated systematic jump. Finally we proceeded to select with the Kish rule at the individual responsive bigger than 18 years who inhabits in the selected housing.

Study Description: Netherlands

Study title: Family 2002

Fieldwork dates: 17.10.2002 – 26.01.2003

Principal J.W.Becker

investigators:

Sample type:

- Sample of clusters of addresses
- Contacting addresses in the cluster one after another
- Selecting a respondent in a given address

SCP organized two ISSP-modules in one research, the Cultural Changes Survey of 2002. The fieldwork took place from October. 17. 2002 to January. 26.2003.

The research is divided into two parts: a conventional face to face, computer assisted interview and an interview by way of computer panel. This was also the case with the survey in 2000. The variable INSTRU refers to the composition of the survey: 1422 respondents were interviewed face to face, 1249 completed the ISSP-questionnaire. We send you the data from the conventional part of the research only. These data are comparable to our usual way of data collection and the Archive can use them without any objection.

For the first time, the marketing organization NIPO contacted households by phone in order to ascertain household composition. During the call a particular respondent was selected and it was asked whether he or she was willing to participate. The variable INSTRU02 shows the number of respondents that could be reached by phone (1054), 944 respondents completed the drop-off questionnaire. 305 respondents couldn't be contacted in advance, but fully took part in the ISSP-research.

Response:

We will complete the ISSP Study Description Form for both modules as soon as possible. Please note that our sample is based on clusters of addresses. At one address of one cluster one person or two persons can be interviewed. If an interviewer has success in a cluster, he moves on to another one. It may be possible that he realised an interview at his first attempt. In that case he doesn't use the cluster any more and the remaining addresses are in fact superfluous. This means that far less addresses are contacted than issued. NIPO issued 8725 addresses and contacted 5065. The number of 5065 can be subdivided as follows. At 2450 of the addresses the interview was refused. At 1347 addresses nobody answered the door, even after the obligatory third visit. At 1268 addresses one or two interviews were realised, resulting in 1422 interviews.

These 1422 people also got the drop-off interview. They were offered an incentive - voucher for books, presents or flowers – and the interviewer

collected the interview in person. As the respondents had to complete two questionnaires SCP doubled the incentive to 15 euro. 173 persons didn't complete the ISSP-list, which leaves us with 1249 completed interviews.

If we exclude the 1347 addresses where absolutely no contact was established from our calculations, the response is 34% at the level of addresses (1268 interviews on 3718 contacts). On the level of clusters the response was much higher, 73% (1268 interviews on 1745 clusters). Of course this improvement is due to the fact that at least one interview per cluster is regarded as response. We think therefore the lower percentage to be more realistic.

SAMPLING INFORMATION

Sampling Procedure

The sample was randomly selected from the 1999 New Zealand electoral roll, which contains the names of all registered voters over the age of 18 years. The achieved sample is generally representative of the New Zealand population over 18 years of age, but people under 30 are underrepresented in the sample, while those over 30 are overrepresented, and the proportion of women is higher than in the population whereas the proportion of men is lower. The data have not been weighted to correct these biases. However, comparisons of unweighted survey results with results obtained from the sample weighted so that its age-sex distribution matched that of the New Zealand population over 18 (taken from 2001 Census), showed only minor differences between estimates.

Survey Administration Procedure

The questionnaire together with a covering letter was sent to the 2075 selected participants on 8 August 2002. A reminder postcard was sent to all participants on 22 August. A second reminder and another questionnaire were mailed to participants whose questionnaires had not been returned after a further two weeks. A final reminder letter (without an accompanying questionnaire) was sent to all remaining no respondents on 19 September. The survey was closed off on 30 October, 12 weeks after the initial mailing.

Response Rate

The response rate achieved was $1025/(2075-364) = 59.9\%$

	Response from first mailing*	Response from second mailing	Response from third mailing	Response from fourth mailing
Issued	2,075	1,326	1,117	776

Study Description: Northern Ireland

Study title: Northern Ireland Life and Times Survey (NILT), 2002

Fieldwork dates: October 20th 2002 and January 11th 2003

Principal investigators: Paula Devine
Institute of Governance, Public Policy and Social Research
Queen's University, Belfast
Northern Ireland BT7 1NN

Lizanne Dowds
Aberfoyle House
University of Ulster
Derry/Londonderry
Northern Ireland BT48 7JA

Sample type: The survey was designed to yield a representative sample of men and women aged 18 and over living in Northern Ireland. The Postal Address File (PAF) was used as the sampling frame for the survey and a simple random sample of addresses was obtained after stratification into three geographic regions (Belfast, East of the Bann and West of the Bann). This was done to ensure the adequate representation of areas of lower population density and is standard practice in Northern Ireland Social surveys. At selected addresses, a KISH grid procedure was utilised to randomly select one individual to be the subject of the survey.

The sample selected was slightly larger than necessary in order to provide reserve addresses. Interviewers were instructed to make a total of five calls, or have received a refusal or other information confirming that an interview would not be obtained, before being issued with reserve addresses. This was to ensure optimal response from the main sample.

The ISSP module was included in the self completion questionnaire given to all respondents. However, due to technical problems, approximately one third of respondents were given slightly different versions of some questions (from an earlier draft). Therefore the data file only includes responses to the final version of the questionnaire.

Fieldwork institute: Interviewing was carried out by social survey interviewers employed by Research and Evaluation Services (RES). All fieldworkers attended one of four briefing sessions conducted jointly by RES and members of the NILT project team.

Fieldwork methods: All interviews were conducted in the respondent's homes. Interviewers made up to a maximum of five calls before the person identified in the sample was deemed to be 'non-obtainable'.

The main interview was carried out using computer assisted personal interviewing (CAPI) and the respondent was then asked to complete a self-completion form. The self-completion form was either completed and handed back to the interviewer at the time of the main interview, or the interviewer called back at a later stage to collect it.

Advance mail shot

Households identified in the sample were sent an advance letter which explained the background to the survey, outlined the method by which an individual respondent would be selected from the household and requested co-operation with the project. The letter provided households with contact details for the project team and RES, and also confirmed that a donation of one pound would be made to Action Cancer on behalf of each respondent.

Sample size: 987

Response rates:
These figures are for
Main NILT survey

2973	A - Total issued (total sample)
80	B - Ineligible (address vacant, wrong ages,...)
2893	C - (= A - B) Total eligible (in scope sample)
1800	D - Total ISSP questionnaires received
1093	E - (= C - D; = F + G + H) Total non-response
631	F - Refusals (refusing to take part)
405	G - Non-contact (never contacted)
57	H - Other non-response

There were 1800 respondents to the Northern Ireland Life and Times Survey. Of these, 1459 completed a self-completion questionnaire (which included the ISSP module): 81%. However, due to a printing problem, only 987 questionnaires contained the correct set of questions.

Language: English

Weighted: Yes

Weighting procedure: It is not possible, using the Postcode Address File, to select addresses with probability proportionate to the size of the household. To compensate for this potential source of bias, the data should be weighted before analysis. The weighting adjusts for the fact that individuals living in larger households had a lower chance of being included in the sample than individuals living in smaller households. The data are weighted in relation to the number of eligible adults at that address, derived from the details of household structure recorded by the interviewers. In order to retain the actual number of interviews, the weighted sample was scaled back to the originally achieved sample size.

*Context of ISSP
questionnaire:*

The Northern Ireland Life and Times Survey is a direct descendent of the Northern Ireland Social Attitudes Survey (NISA) which ran from 1989 to 1996. NISA was a sister survey to the British Social Attitudes Survey (BSA), and by running the same modules as BSA it provided a time-series of social attitudes allowing comparisons with Britain. Against the background of the new political arrangements in Northern Ireland it was agreed that the new Northern Ireland Life and Times Survey would be better served by cutting its links with its British counterpart. NILT now carries on the tradition of a time-series of attitudes but has shifted the focus away from comparisons with Britain. It is largely Northern Ireland focused; it is social policy focused; and it is designed to be used by the wider public in Northern Ireland. Nonetheless, every year includes a substantial component which either continues an old NISA time-series, or replicates a BSA module.

Each year over 30 countries participate in the International Social Survey Programme (ISSP) in which the same module of questions is asked cross-nationally. Northern Ireland has also taken part in this exercise (via NISA) since 1989.

Comparison with other surveys: Continuous Household Survey 2001/02 and 2001 Census of Population

There are 1800 respondents to the Northern Ireland Life and Times Survey. 987 of these respondents completed the final ISSP module.

Study Description: Philippines

Study title: ISSP 2002 Module on Family in the Philippines

Fieldwork dates: November 15 – December 2, 2002

*Fieldwork:**Location:*

The ISSP 2002 Module of family survey covered the entire Philippines and had four major study areas: National Capital Region (NCR), Balance Luzon (outside NCR), Visayas and Mindanao.

Timetable:

National Capital Region	-	November 15 – December 2, 2002
Balance Luzon	-	November 16 – December 1, 2002
Visayas	-	November 20 – December 1, 2002
Mindanao	-	November 19 – December 1, 2002

Respondents:

The survey gathered data through face-to-face interviews of voting-age adults (18 years old and above). It takes a host of questions about political, social and economic issues, some undertaken as regular indicators monitored over time and other reflective of current concerns as well as specific personal information. It also obtained information and background characteristics about the household, the household head and family members.

Sampling Method:

Sampling Sizes and Error Margins. An indicator of data quality used is the standard error of the estimate, on which the margin for sampling error is based. As survey statistics are mostly proportions, the key measure of data precision is the standard error of a proportion taken from a sample. It is computed as follows:

$$\pm Z * \sqrt{p(1-p)/n}$$

Where Z, at 95% confidence level is 1.96; p is the sample proportion estimate and n is the sample size. The overall sample size of 1,200 voting-age adults for each of the questionnaires gives a maximum error margin of $\pm 2.83\%$ at the 95% confidence level, assuming a simple random sampling design. The sampling error is at its highest when the true proportion being estimated is close to 50%.

The following approximate 95%-confidence margins for sampling error should be made when aggregating data at various levels:

	Sample Size	Error margin
Philippines	1200	$\pm 3\%$
National Capital Region	300	$\pm 6\%$
Balance Luzon	300	$\pm 6\%$
Visayas	300	$\pm 6\%$
Mindanao	300	$\pm 6\%$

However, somewhat higher error margins should be expected since multi-stage cluster sampling was used; this design-effect is not readily measurable through established statistical software.

Sampling scheme. The Philippines were divided into four study areas: National Capital Region(NCR), Balance Luzon, Visayas, and Mindanao. The sample size for each of the four study areas was 300 voting-age adults.

Multi-stage probability sampling was used in the selection of sample spots. The allocation of sample units in each stage was as follows:

	Sample Prov.	Sample Mun.	Spots	Probability Respondents
National Capital Region	-	17	60	300
Balance. Luzon	10	15	60	300
Visayas	5	15	60	300
Mindanao	5	15	60	300
	20	62	240	1200

For the National Capital Region

Stage 1. Selection of sample Precincts

For NCR’s first stage, 60 precincts were distributed among the 17 NCR cities and municipalities in such a way that each city/municipality was assigned a number of precincts that was roughly proportional to its population size. An additional provision was that each municipality must receive at least one precinct.

Precincts were then selected at random from within each municipality with probability proportional to population size.

Stage 2. Selection of Sample Households

In each sample precinct, interval sampling was used to draw 5 sample households: A starting street corner in the precinct map was drawn at random.

The first sample household was selected randomly from the households nearest to the starting street corner.

Subsequent sample households were chosen using a fixed interval of 6 households in between the sample ones; i.e. every 7th household was sampled.

Stage 3. Selection of Sample Adult

For the third stage, in each selected household, a respondent was randomly chosen among the household members who were 18 years of age and older, using a probability selection table. In selecting the probability respondent in a household, only male family members were pre-listed in the probability selection table of odd-numbered

questionnaires; only female family members were pre-listed for even-numbered questionnaires; In case where there was no qualified probability respondent of a given gender, the interval sampling of households would continue until five sample respondents were identified.

For the rest of the Philippines

Stage 1. Allocation and selection of sample provinces

Balance Luzon was further divided into 5 regions: CAR + Region II, Region I, Region III, Region IV and Region V; Visayas into 3 regions: Region VI, Region VII and Region VIII; and Mindanao into 5 regions: Region IX, Region X + CARAGA, Region XI, Region XII and ARMM.

Using probability proportional to population size (PPS) of the region, the allocation of 10 provinces in Luzon, and 5 each in Visayas and Mindanao were as follows:

Luzon		Visayas		Mindanao	
CAR/REG II	1	Region VI	2	Region IX	1
Region I	1	Region VII	1	RegX+CARAGA	1
Region III	2	Region VIII	1	Region XI	1
Region IV	3			Region XII	1
Region V	1			ARMM	1
Non-quota	2		1		0
Total	10		5		5

The non-quota provinces were selected without replacement using probability proportional to their remainders. The remainders are the fractions derived when the proportion of the regions (based on their respective study area) are multiplied by 10 for Luzon, and 5 each for Visayas and Mindanao. For instance, if 1.45 is obtained for Region I, then 1 province is assigned to this region and the remaining fraction of 0.45 is included for the allocation of the non-quota province.

Given the quota for each region, sample provinces were then selected by PPS, without replacement. An additional provision is that each region must receive at least one province.

Stage 2. Allocation and selection of sample municipalities

Within each study area, 15 municipalities were allocated among the sample provinces. 15 were multiplied by the proportion of the provinces. The resulting integers became the number of municipalities in that province. If there were remaining municipalities to be allocated, they were distributed using probability proportional to the remainders. Sample municipalities were then selected from within each sample province with probability proportional to population size, without replacement. An additional provision was that each province must

receive at least one municipality.

Stage 3. Allocation and selection of sample spots

Once the sample municipalities were selected, 60 spots for each of the major areas were allocated among the sample municipalities. Using the quota set for spots in each region, the spots were distributed in such a way that each municipality was assigned a number of spots roughly proportional to its population size.

Luzon		Visayas		Mindanao	
CAR/REG II	8	Region VI	25	Region IX	10
Region I	8	Region VII	21	RegX+CARAGA	16
Region III	14	Region VIII	14	Region XI	17
Region IV	21			Region XII	9
Region V	9			ARMM	8
Total	60		60		60

If the chosen sample municipality/city is 100% urban based on the 1990 (latest) NSO classification, then sample precincts were systematically drawn from this city/municipality. Otherwise, sample barangays within each sample municipality were selected using simple random sampling without replacement.

If based on the National Statistics Office categorization, the chosen sample municipality/city was 100% urban in 1990 (latest), then sample precincts were systematically drawn from this municipality/city. Otherwise, sample barangays within each sample municipality were selected with equal probabilities.

In the effort to update the urban-rural classification of barangays, the survey adopted a classification scheme slightly different from the official NSO definition. The interviewers were instructed to ascertain whether the barangay has the following:

- A. Street patterns, i.e. network of streets in either parallel or right angle orientation
- B. At least 6 establishments (commercial, manufacturing, recreational and/or personal services)
- C. At least three of the following:
 1. Town/Barangay Hall/Church/Chapel
 2. Public Plaza/Park/Cemetery
 3. Market Place
 4. Public building like school, hospital, health centre or library

If the barangay has all categories as A, B or C, then the barangay were classified as urban. Otherwise, the barangay was classified as rural.

Stage 4. Selection of Sample Households

For the fourth stage, within each sample spot, five households were established by systematic sampling. In sample (urban) precincts, a random corner was identified; a random start generated; and the interval was seven. In ascertained urban barangays (with no precinct maps), the designated starting point was the same as in rural barangays – it was a school, the barangay captain's house, a church/chapel or a barangay/municipal hall. The sampling interval for urban barangays was seven, while for rural barangays it was two.

Stage 5. Selection of Sample Respondents

For the fifth and final stage, as discussed earlier, a respondent was randomly chosen from among the voting-age adults in each selected household using a probability respondent selection table.

*Research
Methodology:*

a. Preparation

1. Questionnaire

The definitive language-version of the questionnaire, Tagalog, was translated into English, Cebuano, Ilonggo, Ilocano and Bicolano by language experts. Then the language translation was translated back to Tagalog by another set of experts to make sure that the messages were conveyed accurately.

2. Pre-Testing and finalizing the questionnaire

SWS pre-tested the questionnaire on 10 voting-age adults from different socio-economic classes in order to:

- Determine the time length of the interview
- Improve the wording of the questions, if necessary
- Eliminate unnecessary questions or add new items, as the case may be
- Test question sequence and identify biases
- Correct and improve translation
- Change open-ended questions into multiple choice questions
- Find out which items are conceptually vague
- Check accuracy and adequacy of the questionnaire instructions
- Determine whether the focus of the question is clear
- Identify interviewer's recording difficulties

3. Training

- (a) Training was conducted in 3 central locations: Manila, Iloilo city and Cebu City. The interviewers needed to cover Luzon were trained in Manila. They implemented the Tagalog and Ilocano versions of the questionnaire. Those trained in Iloilo covered Ilonggo-speaking regions, while those in Cebu City covered all of Cebuano-speaking areas (Central & Eastern Visayas and Mindanao).
- (b) Training time – The minimum training time for group

supervisors and interviewers was 3 days prior to field implementation.

- (c) **Training Activities** – These mainly consisted of:
One or two day's office training to learn the basics of the project.
Mock interviews with co-workers to get accustomed to the flow of interviewing and questionnaire format.
Practice interviews with a supervisor until the interviewer could be left on her own.
- (d) **Evaluation of interviewer's work** – The interviewer was left to interview on her own only after she has conducted 3 successive interviews without committing any error in interviewing and recording.

b. Field Work

1. Supervision

Supervisors reporting to the field manager monitored the study full-time. They observed interviewers, (at least 10% of total interviewers were observed by supervisors), followed-up and did surprise checks on the field interviewers. They also ensured that field logistics were received promptly and administered properly.

2. Spot-checking

Spot-checking was done at various stages of fieldwork. The first one took place after about 30% of interviews were completed. The second spot-checking was conducted after 60% completion and the last one, immediately after 90% completion of interviewing. During spot-checking, at least 20% of the unsupervised interviews were reinterviewed/backchecked.

c. Number of calls and Substitution

A respondent not contacted during the first attempt was visited for a second time. If the respondent remained unavailable, a substitute who possessed the same qualities (in terms of gender, age bracket, and socio-economic class) as the original respondent was interviewed. The substitute respondent was taken from another household beyond the covered intervals in the sample precinct/barangay.

d. Field Editing

- (a). After each interview, the interviewer was asked to go over her own work and check for consistency.
- (b). All accomplished interview sheets were submitted to the assigned group supervisor who, in turn, edited every interview.
- (c). **Data Processing**
 - (1) An office editor conducted a final consistency check on all interviews prior to coding.
 - (2) Interview sheets were edited/checked twice by office editors before the information was encoded into diskettes.
 - (3) A data entry computer program verified and checked the consistency of the encoded data before data tables were generated.

Weighting procedure: To yield representative figures at the national level, census-based population weights were applied to the survey data. The weight projection was computed by dividing the projected population in the area by the sample size of the same area. Appropriate projected factors were applied so that original population proportion were reflected in the data tables using this formula:

$$\text{Projection factors (Weight)} = \frac{\text{Population}}{\text{No. of Interview}}$$

For questions answered by the sample voting-age adults, the following projection factors were used:

	2002 NSO Projected population Aged 18 and above	Total Sample size	Projection factor for 1 Probability Respondent (000)	Projection factor for 2 Probability Respondent (000)
NCR	6,926,430	300	23.0881014336	11.5440507168
Balance Luzon	19,631,544	300	65.4384809797	32.7192404898
Visayas	9,281,157	300	30.9371910397	15.4685955199
Mindanao	10,634,787	300	35.4492909369	17.7246454685
TOTAL	46,473,919	1,200		

The SPSS version of the data file is already weighted according to the above projection factors. As the data are weighted, the total number of cases that appear is 46,474. This figure is in thousands, i.e., 46,473,919 persons representing NSO’s projected number of adults (18 years old and above) for year 2002 based on the 1995 Census.

Researchers who are defining data using the ASCII files should apply these projection factors.

*Source: National Statistics Office 1995 Census of Population, Report No.2, Socio-Economic and Demographic Characteristics

Study Description: Poland

Study title: Polish General Social Survey/ISSP, 2002

Fieldwork dates: April; 2002

Principal investigators: Bogdan Cichomski, Institute for Social Studies, Warsaw University (ISS UW) and Warsaw School of Social Psychology (SWPS)

Sample type: Multi-stage area probability sample.
In the first stage the area of Poland was divided into 48 primary sampling units (strata). They consisted of 12 regions and 4 size classes (cities having more than 100 thousands inhabitants, cities between 20 and 100 thousands inhabitants, cities less than 20 thousands inhabitants, and villages). Statistical regions were drawn with probabilities proportional to number of households in each stratum. In the second stage households were drawn from statistical regions. Coming to every household an interviewer gathered information about month and year of birth of all persons living in the household and then they selected one respondent from all persons 18 or more years old using Kish grid (unique for every household).

Fieldwork institute: Public Opinion Research Centre (CBOS), Warsaw

Fieldwork methods: Self-administered supplement completed after the PGSS and face-to-face interview (self-administered/interviewer attending =81,5%) + (face-to-face interview/no visuals = 18,5%)
[see MODE-variable in the Polish data file]

Context of ISS Questionnaire: Self-administered supplement at end of in-person PGSS interview

Sample size: 1252 = number of respondents achieved on ISSP 2001

Response rates:

2004	A - Total issued (total sample)
143	B – Ineligible (address empty, demolished houses, no private dwellings)
1861	C – (=A-B) Total eligible (in scope sample)
1252	D - Total ISSP questionnaires received
609	E – (=C-D; = F+G+H) Total non-response
403	F - Refusals (refusing to take part)
200	G - Non-contact (never contacted)
6	H - Other non-response

Language: Polish

Weighted: YES:
The weighting factor used consists of two elements. First: each case was weighted by the number of person 18 or more years old, living in a household. Then, post-stratification weighting was applied. Using census

data about gender, age (five categories) and type of place of living (seven categories), a 70-cells table was created. For every cell a sampling rate was estimated. Post-stratification weighting was based on those coefficients. Finally, the weighting factor was normalised to the number of interviews completed.

Known systematic properties of the sample:

No biases or other deviation of the sample (after weighting) (see: National Population Characteristics, 18 years or older; POLAND)

Deviation from ISSP questionnaire:

None

Publication:

None

Study Description: Portugal

Study title: Family and Gender Roles

Fieldwork dates: 15/02/03 to 31/07/03

Principal investigators: Manuel Villaverde Cabral; Jorge Vala, Alice Ramos, all from Instituto de Ciências Sociais da Universidade de Lisboa

Sample type: Stratified random probability. The sample is designed to be representative of adults aged 18 or over living in private accommodation in Portugal. The sample method involved a multi-stage design: stratification by region and habitat; Selection of sampling units (100); selection of streets: selection of addresses by random root; selection of individuals by the last birthday method. Stratification factors used:

- NUTES (North, Centre, Lisbon and Tagus Valley, Alentejo and Algarve)
- HABITAT(less than 2.000 hab.; 2 – 10 thousand hab; 10 – 30 thousand hab; 30 – 100 thousand hab; more than 100 thousand hab)

In order to get a representative sample, near 50% of the interviews were made in habitats with less than 2000 hab. Some problems came up, such as, a level of non-responses and refusals higher than expected.

Fieldwork institute: Motivacao-Estudos Psico-sociologicos

Fieldwork methods: face-to-face interview with visuals

Sample size: 1092

Response rates:

2154	A - Total issued (total sample)
174	B – Ineligible (address vacant, wrong ages...)
1980	C – (=A –B) Total eligible (in scope sample)
1092	D - Total ISSP questionnaires received
888	E – (=C – D; = F + G + H) Total non-response
501	F - Refusals (refusing to take part)
375	G - Non-contact (never contacted)
12	H - Other non-response

Language: Portuguese

Weighted: Yes

Weighting procedure: A cross-table of the following variables was made
Age groups
Sex

Education degree
Region x habitat

*Known systematic
properties of the
sample:*

The achieved sample was biased in what concerns gender (more women than in the population), educational level and age. The weighting factor was constructed in order to correct those biases.

*Deviations from ISSP
questionnaire:*

Publication:

National Population Characteristics: Portugal

Each ISSP member is asked to include to the documentation the following information about known characteristics of its national population, from census or the best available estimates from government surveys or other high-quality data-sources :

Sex distribution of the population

Age distribution of the population

Education (years of schooling) of the population

Employment rate of the population

Study Description: Russia

Study title: Family and Changing Gender Roles III 2002 Russia

Fieldwork dates: February 22 – March 18, 2002

Principal investigators: Dr. L. Khakhulina

Sample type:

a). The universe sampled

Adult population of Russia aged 18 years and older

b). Categories of population excluded from the sample

From the total adult population of Russia were excluded the following categories:

- a) persons, doing their military service by draft (about 1% of the total adult population);
- b) persons under imprisonment (about 0,8% of the total adult population);
- c) Persons living in remote or difficult of access regions of Far North (0,9% of the total adult population);
- d) Persons living in area of war conflict in North Caucasus – population of the republics: Chechnia, Ingushetia and Dagestan – (1,9%)
- e) Persons residing in rural settlements with not more than 50 inhabitants (about 0,8% of the total adult population).

Besides, no homeless people get into the sample (from 1% to 1,5% of the total adult population by various expert estimations).

c). Stratification procedure

Nationwide sample (N=1800) was divided among:

- a) 10 large economy-geographical regions (Northern + North-Western, Central, Volgo-Viatka, Cebtral-Chernozemie, Povolzhie, Northern Caucasus, Urals, Western Siberia, Eastern Siberia and Far East) proportionate to the local population aged 18+ of each economic region
- b) 6 strata of settlements inside each region (from 100 – to 1,000 inhabitants; from 1,000 – to 10,000 inhabitants; from 10,000 – to 100,000 inhabitants; from 100,000 – to 500,000 inhabitants; from 500,000 – to 750,000 inhabitants; over 750,000 inhabitants) proportionate to the population aged 18+ of the stratum.

d).

Region	100-1000	1-10 ths.	10-100 ths.	100-500 ths.	500-700 ths.	750 ths and over	Total
1. Northern + North-Western	16	25	41	42			124
2. Central	34	46	88	79	22		269
3. Central Chernozemie	20	23	19	20	7	12	101
4. Povolzhie	29	36	34	30	31	55	215
5. Northern Caucasus	13	60	40	38	8	13	174
6. Volgo – Viatka	20	20	22	26		18	106
7. Urals	35	39	61	47	15	59	255
8. Western Siberia	23	36	43	33	21	34	190
9. Eastern Siberia	13	26	25	26	8	11	109
10. Far East	9	17	21	16	16		78
Sr.-Petersburg						63	63
Moscow						115	115
Total	212	329	395	356	129	381	1800

e). Selection of primary sampling units (PSUs).

All cities with population over 500,000 inhabitants were included into sample as self-representative objects.

The urban and rural settlements were used as primary sampling units (PSUs).

In each stratum (excluding stratum with self-representative objects) one or more PSUs were selected with the probability proportionate to size (with condition of 7-10 interviews per PSU). The number of interviews in a stratum was divided into equal parts among the selected PSUs.

Totally 165 PSUs were selected.

f). Selection of sampling points (SSUs).

Electoral districts were used as sampling points (SSUs). In each selected PSU two sampling points were randomly selected from the list of all electoral districts of this PSU (except for cities with population over 750 ths. People where number of surveyed SSUs was defined on condition 4-5 interviews per SSU).

Totally 375 sampling points were selected.

g). Selection of households

Selection of households in each sampling point was carried out by means of a random route method. With a prescribed starting point, the interviewer polled every 17th household from the list of all households of the selected electoral district.

If household or respondent refused to take part in the survey or was not been achieved during 4 visits, interviewer visited the next address from the list of households of this electoral district to conduct an interview.

h). selection of respondents

Within a household a respondent which birthday is the nearest was selected.

In order to interview a selected respondent, an interviewer visited each address up to 4 times in different days of a week and different time of a day.

Fieldwork methods: Face-to-face interview

Fieldwork institute: VCIOM

Sample size: 1,800

Response rates:

5476	A - Total issued
187	B – Not eligible
5289	C - Total eligible
1798	D - Total questionnaires received
3491	E – Non-response
2373	F – Refusals
1089	G – Non-contact
29	H - Other non-response

Language: Russian

Weighted: Yes

Weighting procedure: a) Main principles of weighting procedure
The total expected number N of respondents for a certain region being treated equals
 $N = N_0 * P$
Where N₀ denotes the size of whole sample, P stands for share of the region in the entire population.

The following population groups were controlled in weighting:

(1) men aged 18-24 years with high or incomplete high education
(2) men aged 25-39 years with high or incomplete high education
(3) men aged 40-54 years with high or incomplete high education
(4) men aged 55+ years with high or incomplete high education
(5) men aged 18-24 years with average education
(6) men aged 25-39 years with average education
(7) men aged 40-54 years with average education
(8) men aged 55+ years with average education
(9) men aged 18-24 years with incomplete average education
(10) men aged 25-39 years with incomplete average education
(11) men aged 40-54 years with incomplete average education
(12) men aged 55+ years with incomplete average education
(13) women aged 18-24 years with high or incomplete high education
(14) women aged 25-39 years with high or incomplete high education

(15) women aged 40-54 years with high or incomplete high education
(16) women aged 55+ years with high or incomplete high education
(17) women aged 18-24 years with average education
(18) women aged 25-39 years with average education
(19) women aged 40-54 years with average education
(20) women aged 55+ years with average education
(21) women aged 18-24 years with incomplete average education
(22) women aged 25-39 years with incomplete average education
(23) women aged 40-54 years with incomplete average education
(24) women aged 55+ years with incomplete average education

As a result of correction, every respondent $X[k]$ becomes supplied with definite weight $W[k]$, being within the limits $0 < W[k] < \sim 10$, so that the following conditions were valid:

- 1) the value of $\sum(W[k])$ concerned were equal to N and
- 2) for every controlled group $G[i]$ the value $Q[i]$ being equal to

$$Q[i] = \sum(W[k] \mid X[k].\text{belong to } G[i]) / N,$$

were closed to a proportion $P[i]$ of group $G[i]$ in population.

The value of J being equal to

$$J = \sum((Q[i]-P[i])**2) + (\sum(W[k])/N - 1)**2$$

Serves the criterion for minimization on the weights sets variety.

Weighting of the data was made in two stages. Weighting coefficients were calculated on characteristics of gender, age, education and region. Statistical data for weighting was drawn out of the data on January, 1 2000 given by the State Statistics Committee.

Study Description: Slovenia

Study title: Slovene Public Opinion Survey 2003/2: International Survey on Family and National Identity and Attitudes on Local Democracy

Fieldwork dates: February 2003 – March 2003

Principal investigators: Niko Toš, Public Opinion and Mass Communication Research Centre (CJMMK), Ljubljana.

Sample type: Universe: The adult residents of SR Slovenia, older than 18 years, living on permanent address. Excluded: Institutionalised people. Central Register of Population (a list of names and addresses constantly undated by public administration) is employed as a sampling frame. Sampling procedure: The sample is two-stage stratified random sample from Central Register of Population, where every population unit has equal probability of selection. First stage PSU selection is made by probability proportional to size of CEA (Clusters of Enumeration Areas). CEA are stratified according to 12 regions*6 type of settlement. At second stage systematic random selection inside CEA brings fixed numbers of persons with name and address. Split-halves samples were used for parallel SJM surveys.

Fieldwork methods: Personal interviews with trained interviewers

Fieldwork institute: Public Opinion and Mass Communication Research Centre (CJMMK), Ljubljana

Context of ISSP-questionnaire: ISSP 2002 questionnaire lie at the beginning of the SJM 2003/2 questionnaire. Then follows the ISSP 2003.

Sample size: 1093

Response rates:

ISSP Characteristics of National Population: SPAIN

Each ISSP member is asked to include to the documentation the following information about known characteristics of its national population, from census or the best available estimates from government surveys or other high-quality data-sources:

- Sex distribution of the population
- Age distribution of the population
- Education (years of schooling) of the population
- Employment rate of the population

Study Description: Switzerland

Study title: ISSP 2002 Family and Changing Gender Roles

Fieldwork dates: November the 27th 2002 until March the 31st 2003

Principal investigators: Institute SIDOS, Ruelle Vaucher 13, CH-2000 Neuchâtel

Sample type: The ISSP 2002 survey was combined with the “Eurobarometer in Switzerland” (EBCH) survey. The questions related to the “Eurobarometer in Switzerland” were first asked followed by those of the ISSP 2002 using the CAPI method. The sampling procedure was the following:

- Stratification of the households into 6 regions (Espace Mittelland, North of Switzerland, East of Switzerland, Centre of Switzerland and Italian-speaking part of Switzerland)
- Random selection of households from the extended phone register
- Sending of an information letter
- First contact per phone or face to face from the interviewer to fix a date for the interview
- Random selection of one person in each household with the KISH method
- EBCH and ISSP Interview (CAPI)

Fieldwork institute: MIS Trend, Institut pour l'étude des marchés et les sondages d'opinion, Pont-Bessières 3, 1005 Lausanne

Fieldwork methods: CAPI

Sample size: 1008

Response rates:

3280	A – Total issued (total sample)
478	B – Ineligible (address vacant, wrong ages, sick, language, ...)
2802	C – (=A – B) Total eligible (in scope sample)
1008	D – Total ISSP questionnaires received
1794	E – (=C – D; =F + G + H) Total non-response
1485	F – Refusals (refusing to take part)
171	G – Non-contact (never contacted)
138	H – Other non-response

Language: German, French and Italian

Weighted: Yes

Weighting procedure: The weights were defined according to the following criteria:

- Size of household (estimation based on data from 1997, based on the Swiss federal census 1990 and its evolution)
- Age (Swiss federal census 2000)

The size of the household was recoded into the following four categories:

- 1) Household with 1 person
- 2) Household with 2 persons
- 3) Household with 3 persons
- 4) Household with 4 persons and more

The age was recoded into the following six categories:

- 1) 15 – 24 years
- 2) 25 – 34 years
- 3) 35 – 44 years
- 4) 45 – 54 years
- 5) 55 – 64 years
- 6) 65 and older

Known systematic properties of the sample:

Under-representation of young people

Deviations from ISSP questionnaire:

Due to an error, the two additional background questions v70 and v71 were omitted. Therefore they have been asked later in a telephone interview.

Publication:

* Weighted by number of eligible respondents (i.e. 18+) in the household.

** The GSS figures are based on 18+.

A Comparison of the 2002 Current Population Survey
to the 2002 General Social Survey
Tom W. Smith and Jibum Kim
March, 2002

In accordance with the documentation standards of the International Social Survey Program (ISSP), we compare in Table 1 the distributions for age, gender, years of schooling, and labour force participation from the 2002 Current Population Survey (CPS).*

First, the weighted and unweighted GSS distributions match the CPS figures about equally well overall (Table 2). The weighted figures are better on gender and age, there are no meaningful differences on education, and the unweighted figures are closer labour force categories.

Second, the GSS-CPS matches are generally good. Age distributions correspond closely across most age groups, but the GSS did under represent those under 25. This is primarily due to the high number of people in the non-household population for this age group. Women are overrepresented on the GSS. This is common to virtually all full probability, random respondent surveys.**

Third, the GSS under represents the least educated. It appears that much of this difference results from variations between the CPS and the GSS in how the item on education is asked and coded rather than because of sampling representation.

Finally, the GSS under represents those not currently employed. At least some of this difference comes from the 16 and 17 year olds included in the CPS figures. Very few are currently employed and their inclusion lowers the total percent employed and increases the other two categories.

Table 2
A Summary Comparison of the 2002 Current Population Survey and the Weighted and Unweighted 2002 GSS
(GSS% - CPS%)

	Unweighted	Weighted
A. Age		
18-24	-3.8	-1.6
65+	+3.6	+1.5
B. Gender		
Female	+4.4	+3.0
C. Years of schooling, 25+		
0-8	-1.0	-1.0
16+	+0.1	-0.3
D. Labour Force Participation, 16+		
Employed	-1.4	-2.0
Unemployed	-0.2	-0.2
Not in Labour Force	+1.5	+2.2

* The 2002 GSS fielded the family, work, and gender II and social networks and support modules.

** The CPS uses household informants rather than random respondents.

Codebook Information

The example below is a reproduction of information appearing in the machine readable codebook. The numbers in angular brackets < > do not appear in the codebook, but are references to the descriptions which follow the example.

Explanations

<1> A variable (and reference) number have been assigned to each item in the study. In the present codebook which documents the archived data set, these numbers are identical. Should the data set be subsetted or rearranged the variable numbers might change to reflect the order of the new data set while the reference numbers would remain unchanged to provide a link to the archived data set.

<2> Indicates the abbreviated (24 character maximum) variable label used within OSIRIS or SPSS system files.

<3> "Location" indicates the starting position of the variable when the dataset is stored in the OSIRIS format. "Width" describes the number of positions of the variable.

<4> "MD" indicates the designation of the missing data. MD1 indicates an explicit defined single value. MD2 designates a single value or a value range, i.e. all values equal or greater than this value have been declared missing. Although these categories are defined as missing data categories, this does not mean that the user should not or cannot use these codes if so desired.

<5> If a variable contains implied decimals, the message "Dec.places: xx" appears here, where xx is the number of decimal places.

<6> Indicates the full question text taken from the British questionnaire. Wherever possible the original sequence of questions has been retained, although some changes were necessary to integrate the different national questionnaires.

<7> Indicates commentaries and explanations added during the processing of the study. < within question or answer texts may indicate whether the questionnaire in a particular country is deviating from the general format.

<8> Indicates the code value for the single answer category.

<9> Indicates the textual definition of the codes. Abbreviations commonly used are DK (don't know), NA (no answer), Can't choose, Not applicable and Not available.

<10> Indicates percentage frequencies by country. This form is used whenever code categories have the same meaning for all countries. Column percentages are based only on "valid cases". Missing data values were excluded from percentages.

V4 Workg mom: warm relation child ok

Location: 14 MD1: 9
 Width: 1 MD2: 8

Q.1 TO BEGIN, WE HAVE SOME QUESTIONS ABOUT WOMEN.
 To what extent do you agree or disagree...?
 (Please tick one box on each line)

Q.1a A working mother can establish just as warm and secure a relationship with her children as a mother who does not work.

USA: In the GSS2002 original questionnaire, the fourth response category for these items (V4 to V13) 'disagree' is omitted.
 Therefore, 'disagree' should be considered as being collapsed into the fifth category of 'strongly disagree' assuming that answers on 'strongly disagree' may reflect both 'disagree' and 'strongly disagree'.

1. Strongly agree
2. Agree
3. Neither agree nor disagree
4. Disagree
5. Strongly disagree

8. Can't choose
9. No answer, refused

V29 Organizing income in partnership

Location: 39 MD1: 0
 Width: 1 MD2: 8

PLEASE ANSWER THE FOLLOWING QUESTIONS IF YOU ARE CURRENTLY LIVING WITH YOUR SPOUSE OR A PARTNER

OTHERWISE GO TO Q.15

Q.7 How do you and your spouse/partner organize the income that one or both of you receive?
 Please choose the option that comes closest.
 (Please tick one box only)

1. I manage all the money and give my spouse/partner his/her share
2. My spouse/partner manages all the money and gives me my share
3. We pool all the money and each take out what we need
4. We pool some of the money and keep the rest separate
5. We each keep our own money separate
6. TWN: my mother-in-law manages the money
8. Don't know
9. No answer, refused
0. NAP, no partner, USA: not married

V30 Division of hh work: doing the laundry

Location: 40 MD1: 0
 Width: 1 MD2: 8

Q.8 In your household who does the following things ...?
 (Please tick one box on each line)

Q.8a <Division of household work: Who ...?>

does the laundry

AUS: for the whole question battery no filter was applied
 PL,NL: for the whole question battery the answer scales of
 the ISSP 1994 were used

- 1. Always me
- 2. Usually me
- 3. About equal/both together
- 4. Usually my spouse/partner
- 5. Always my spouse/partner
- 6. Is done by a third person

- 8. Can't choose
- 9. No answer, refused
- 0. NAP, no partner

Poland, Netherlands: answer scales of the ISSP 1994

- 1. Always the woman
- 2. Usually the woman
- 3. About equal or both together
- 4. Usually the man
- 5. Always the man
- 6. Is done by a third person

- 8. Can't choose
- NL: don't know
- 9. No answer, refused
- 0. NAP, no partner

V43 Who has the higher income?

Location: 55 MD1: 0
 Width: 1 MD2: 8

Q.14 Considering all sources of income, between you and your spouse/partner, who has the higher income?
 (Please tick one box only)

IRL: in original questionnaire a 5 pt scale was used (recoded)

1. My spouse/partner has no income
 (IRL: category missing in original questionnaire)
2. I have a much higher income
 IRL: I have a bit higher income
3. I have a higher income
4. We have about the same income
5. My spouse/partner has a higher income
6. My spouse/partner has a much higher income
7. I have no income
 (DK,IRL: category missing in original questionnaire)
8. Don't know
9. No answer; RP,TWN: both have no income
0. NAP, no partner

V44 So many things to do at home

Location: 56 MD1: 0
 Width: 1 MD2: 8

Q.15 To what extent do you agree or disagree...?
 (Please tick one box on each line)

Q.15a There are so many things to do AT HOME, I often run out of time before I get them all done.

- 1. Strongly agree
- 2. Agree
- 3. Neither agree nor disagree
- 4. Disagree
- 5. Strongly disagree

- 8. Can't choose
 TWN: can't choose, don't know
- 9. No answer
 TWN: refused
- 0. Does not apply

V48 Too tired from work to do duties at home

Location: 60 MD1: 0
 Width: 1 MD2: 8

Q.16 How often has each of the following happened to you during the past three months?
 (Please tick one box on each line)

Q.16a <In the past three months it has happened that ...>

I have come home from work too tired to do the chores which need to be done.

IRL: for the whole question battery a 5 pt answer category scale was used in the national original data set (recoded)
 RCH: for the whole question battery a 3 pt answer category scale was used in the national original data set (recoded to the standard after applying the filtering procedure)
 D: filter refers to an additional variable not included in the national original dataset
 BG,CH,CY,CZ,DK,FLA,P,PL,RCH,RUS,SK: for the whole question battery the filter refers to codes 5-10 in V239 (WRKST)

1. Several times a week
2. Several times a month
3. Once or twice
 IRL: several times a year, less often/rarely
4. Never

8. Don't know
 GB: can't choose
9. No answer
0. Does not apply, no job

V52 Life in general: how happy on the whole

Location: 64 MD1: 9
 Width: 1 MD2: 8

Q.17 If you were to consider your life in general, how happy or unhappy would you say you are, on the whole?
 (Please tick one box only)
 IRL, BR: for this question a 4 pt answer category scale was applied to the national original data set
 (recoded to the standard)

- 1. Completely happy
- 2. Very happy
- 3. Fairly happy
- 4. Neither happy nor unhappy
- 5. Fairly unhappy
IRL: not so happy
- 6. Very unhappy
IRL: not at all happy
- 7. Completely unhappy
- 8. Can't choose
- 9. No answer, refused

IRL: original answer scale (recoded to the standard)

- 1. Very happy
- 2. Fairly happy
- 3. Not so happy
- 4. Not at all happy

BR: original answer scale (recoded to the standard)

- 1. Very happy
- 2. Fairly happy
- 3. Fairly unhappy
- 4. Very unhappy

V53 How satisfied with your main job?

Location: 65 MD1: 0
 Width: 1 MD2: 8

Q.18 All things considered, how satisfied are you with your (main) job?
 (Please tick one box only)
 BR: for this question a 5 pt answer category scale was used in the national original data set (recoded to the standard)
 F,IRL: no 'doesn't apply' and 'no job' filtering procedure was applied

- 1. Completely satisfied
- 2. Very satisfied
- 3. Fairly satisfied
- 4. Neither satisfied nor dissatisfied
- 5. Fairly dissatisfied
- 6. Very dissatisfied
- 7. Completely dissatisfied

- 8. Can't choose
- 9. No answer, refused
- 0. Does not apply, no job
 PL: currently not working

BR: original answer scale

- 1. Very satisfied
- 2. Fairly satisfied
- 3. Neither satisfied nor dissatisfied
- 4. Fairly dissatisfied
- 5. Very dissatisfied

V56 R worked outside: before R has children

Location: 68 MD1: 0
 Width: 1 MD2: 8

PLEASE ANSWER THIS QUESTION IF YOU HAVE EVER HAD CHILDREN.

OTHERWISE GO TO Q.23

Q.21 Did you work outside the home full-time, part-time or not at all ...?
 (Please tick one box on each line)

Q.21a <Work outside the home: respondent>
 After marrying and before you had children?

AUS: no filtering procedure was provided for the national original questionnaire for the items V56 to V63
 CY: filter for the items V56 to V63 is a construction of V203 and V204 (NOT MARRIED, NO PARTNER)
 D: filter was constructed with an additional variable not included in the national original dataset
 A,CH,CZ,E,FLA,IL,J,LV,RCH,TWN,USA: Code 0 in V69 (NEVER HAD CHILDREN) was applied as filter for the items V56 to V63
 PL: Code 0 in V69 (NEVER HAD CHILDREN) was applied as a filter for the items V56 to V59
 RP: Code 97 in V69 (NEVER HAD CHILDREN) was applied as a filter for the items V56 to V63
 F,RUS: Code 0 in V69 (NEVER HAD CHILDREN) and Code 5 im (NEVER MARRIED) was applied as a filter for the items V56 to V63

1. Worked full-time
2. Worked part-time
3. Stayed home
4. TWN: Worked at home

8. Does not apply
9. No answer, refused
 DK,P: no answer, don't know, refused
0. NAP, never had children (Code 00 in V69); never married, no partner

ADDITIONAL COMPULSORY BACKGROUND QUESTIONS FOR THE ISSP 2002 MODULE

The following questions can be asked right after Q.23 or, if they fit better, in the demographic questions part.

Q.24 How many people live in your household?
(Usual formulation followed by country-specific reminders about including respondent and small children, etc.)

Q.24a <Number of people in hh: 18 years and older>

Adults of 18 years and older

A: adults of 16 years and older

CH: constructed with the variable that indicates the total number of people in household and the total number of children (0-17 years) in household.

OPTIONAL BACKGROUND QUESTION

Q.25 How many children have you ever had?

F,RP: Total number of children UNDER 18 YEARS applied to the whole answer categories in V69

- 01. 1 child; F,RP: < 18 yrs
- 02. 2 children
- 03. 3 children
- 04. 4 children
- 05. 5 children
- 06. 6 children
- 07. 7 children
- 08. 8 children
PL,USA: 8 children or more
- 09. 9 children
- 10. 10 children

- 97. RP: never had a child
- 98. Don't know
- 99. No answer, refused
- 00. NAP, never had children, no kids (F,RP: < 18 yrs)
Not available: D,GB,NIRL,IRL,NL,N,S,BG,NZ,SK,CY,

V70 Spouse degree: highest qualification

Location: 87 MD1: 9
 Width: 2 MD2: 8

ADDITIONAL COMPULSORY BACKGROUND QUESTION

Q.26 Education of spouse/partner: highest level of education
 BG: recoded from 'spouse national degree'
 CH: due to an error, this question was not asked during the interview, but asked later in a telephone interview
 DK: derived from two variables: 'school education' and 'education in addition to school education'
 GB: highest qualification of spouse
 IL,NL: recoded from 'spouse national highest degree'
 RCH: in the national original dataset a variable 'Spouse: years of schooling' was delivered, the present V70 was recoded according to an international education scheme

0. No formal qualification
 BR: none, incomplete primary
 CH: incomplete compulsory education
 GB: no qualifications
 MEX: none, still at school
 RP: no formal education, some elementary
1. Lowest formal qualification
 BG: basic (3-4 years)
 BR: primary completed
 CH: compulsory education
 DK: if primary school, lowest level (7 years or less) and no further education
 GB: GCSE grades D-G, CSE or equivalent, foreign, other
 J: junior high school completed, still at high school
 MEX: primary school completed, technical training without secondary
 RP: completed elementary
2. Above lowest qualification
 BR: incomplete secondary
 BG: primary (8 years)
 CH: elementary vocational training; apprenticeship; 2-3 yrs general training school; 1 year trade school; 2-3 years full time vocational training; administrative education; domestic science/linguistic courses
 DK: intermediate secondary completed, if primary school (8-10th grade, not gymnasium) and no further education
 GB: GCSE grades A-C, O-level or equivalent
 IL: incomplete vocational, vocational complete with or without matriculation, incomplete academic secondary
 MEX: secondary school, technical training after secondary
 NL: incomplete higher secondary, still at school
 RP: some high school, some vocational
3. Higher secondary completed
 BR: secondary completed
 BG: secondary (11-12 years)
 CH: secondary education (maturity), teacher training college, graduation diploma school (vocational maturity)
 DK: if gymnasium and no further education, semi-skilled work/education or some kind of vocational training (1 year), or if primary school (7-10th grade) or other school education and semi-skilled work/education or some kind of vocational training (1 year)
 GB: A-level or equivalent
 IL: academic secondary completed with or without matriculation
 J: high school completed, still at junior college or at university
 MEX: high school completed
 RP: completed high school, completed vocational
4. Above higher secondary level
 BR: university incomplete
 BG: college (2-4 years)
 CH: higher vocational education, technical or vocational college (2-3 yrs), advanced technical college (3-4 yrs) and 'other education'
 DK: short (< than 3 yrs) or middle range (3-4 yrs) advanced education, regardless of school-education and whether R has answered NA or don't know
 GB: higher education below degree
 IL: semi higher, post secondary, university incomplete
 J: junior college completed
 MEX: technical training after high school

V70 Spouse degree: highest qualification (continued)

V71 Spouse: hours worked weekly

Location: 89 MD1: 00
 Width: 2 MD2: 97

ADDITIONAL COMPULSORY BACKGROUND QUESTION

Q.27 Number of hours worked per week by spouse/partner

GB: How many hours does she/he normally work a week in her/his main job - including any paid or unpaid overtime?

Round to the nearest hour. If R cannot answer, ask about last week. If R does not know exactly, accept an estimate.

Information was not recorded for Rs working less than 10 hours per week.

CH: Due to an error, this question was not asked during the interview, but asked later in a telephone interview.

CZ: Based on a mistake in the questionnaire, V71 was not included in the questionnaire

<The data are recoded in a categorized format only for presentation in the codebook. The dataset contains the variable unchanged.>

V204 <EDUCYRS> R: Education I: years in school

Location: 205 MD1: 00
 Width: 2 MD2: 98

Education I: Years in school

- A,D, How many years from school to university education but
 CH : without vocational training?
 CZ: Can you please count how many years in total you
 attended school? Include all years spent in any schools,
 even if you didn't complete the course of study, and/ or
 years of study in other than full-time education programs
 including university but not vocational training
 DK: How many years of schooling do (full time, not including
 trainee work etc.) do you have? (subjective measurement)
 Derived from two variables, one measuring 'years in
 school', one measuring 'current status' (still at school
 etc.). In those cases where respondents have answered
 both questions, the latter variable (current status)
 is in all instances the 'strongest' variable.
 F: Years in school: derived from - At what age did you
 finished your studies?
 GB: Years in school: derived from - How old were you when
 you completed continuous full-time education by
 subtracting 5 yrs (school starting age) from the answers
 to the question above
 IRL: How many years of full-time education did you receive?
 N: Years in school after compulsory education
 NL: Years of schooling following R's sixth birthday included
 vocational training, part time courses excluded
 NZ: The values for this variable were calculated from the
 variable asking for the amount of formal education.
 The responses almost certainly include some vocational
 training, and do not distinguish between those who are
 still at university/ polytechnic and those who are not.
 RP: Actual number of years of full-time schooling
 RUS: How many years altogether did you study?
 (including vocational training)
 S: How many years have you attended school, all full-time
 education included?
 SLO: How many years in regular formal schooling?
 USA: What is the highest grade in elementary school or high
 school that you finished and got credit for?

<The data are recoded to a 'common core standard' only for
 presentation in the codebook. The dataset contains the
 variable unchanged.>

V205 <DEGREE> R: Education II: categories

Location: 207 MD1: 9
Width: 2

Education II: Categories

- A: What is your highest achieved level of education?
- CH: Highest degree achieved
- CZ: Can you please count how many years in total you attended school? Include only completed schools; do not include evening schools or extramural study.
- D: What kind of a complete general school-education do you have?
- DK: Derived from two variables: 'school education' and 'education in addition to school education'
- E: Highest level of education
- F: Which level of general education did you achieve?
- GB: Highest educational qualifications obtained
- N: What kind of general education, what kind of vocational education/training, what kind of education on university/college level have you completed? Note: compulsory school was 7 years until about mid 1960's; 9 years of compulsory school was introduced during the 1960's, but at different times in different parts of the country.
- NZ: Which of these categories best describes your highest formal education?
- NL: Constructed from the last followed type of education
- SLO: Name last school you completed, regularly or while working?
- BG,S: Highest level of education
- PL: What is the level of education that you have obtained until now?
- RUS: What education do you have?
- IRL: What is the highest level of education that you attained?
- J: What is your highest school qualification?
- RP: Educational attainment of respondent
- USA: What is the highest degree?

- 0. No formal qualification
- 1. Lowest formal qualification
- 2. Above lowest qualification
- 3. Higher secondary completed
- 4. Above higher secondary level, other education
- 5. University degree completed
- 9. NA

V240 <WRKHS> R: Hours worked weekly

Location: 277 MD1: 00
 Width: 2 MD2: 97

Hours worked weekly

- CZ: How many hours a week do you work on average in you main job and in other paid activities including overtime?
 The original variable has too many missing values due to an error in filter in the questionnaire.
- D: How many hours per week do you normally work in your main job, including overtime?
- DK: Derived from two variables, one where respondents have stated number of working hours, one including those who have answered 'don't know' to the question. In those cases where a respondent have answered both variables, the latter variable (don't know) is in all instances the 'strongest' variable.
- F: (If working) How many hours do you normally work each week?
- GB: (Current job of 10 hours or more per week)
 (If in paid work, employee and self-employed) How many hours a week do you normally work in your main job including any paid or unpaid overtime?
 Note that hours worked were not recorded for Rs working less than 10 hours in their (main) job.
- USA: How many hours did you work last week, how many hours do you usually work a week, at all jobs?
- N: (If in paid work) How many hours per week do you work normally in your main job, including overtime but excluding the time you need to get to your workplace and back home? (not housewife (man) or home duties)?
- NZ: How many hours, on average, do you usually work in a normal week?
- RCH: Decimal places are rounded up
- RP: In total, how many hours a week do you work?

<The data are recoded in a categorized format only for presentation in the codebook. The dataset contains the variable unchanged.>

01. One hour
96. 96 hours and more
 GB: 95 hours and more
97. Refused
98. Don't know, can't say, varies too much
99. No answer, no hours
00. NAP (not in paid work, never had a job, unemployed, not in labour force)
 PL: currently not in labour force

Private versus public sector or self employed:

(If R is employee in current/ last job)

Do you work at present or did you work in the private or public sector before?

In your (main) job are/ were you an employee or self employed?

CZ: Do you work in a private or public sector or are you entrepreneur/ self-employed?

GB: Which of the types of organisation on this card do you/ did you work for?

N: Which type of organisation do you work for in your main job?

NZ: Which of these categories best describes your current employment status?

PL: What is/was the form of ownership of this place of work?

Are/ were you self employed (owner/ co-owner of the firm/farm) or do/ did you worked for someone else?

USA: Asked to all respondents regardless of their current work status. If respondents have no job, they are supposed to answer about their most recent job.

1. Works for government or public sector
 - A: Government or public owned firm
 - BG: State government agency
 - CZ: Governmental organisation, civil service, local council
 - GB,N,SLO: Local, central government,public organisation
 - IRL: Civil service, local authority, non commercial
 - NIRL: Government + publicly owned firms
2. Works for publicly owned firm
 - CZ,BG: State or municipality company, public instit.
 - GB: Nationalised industry or public corporation
 - N: Other public organisations, charity, trust
 - NZ: Publicly owned private sector organisations
 - IRL: Semi-state body
 - S: Public owned, combined public + private
 - SLO: Nationalised industry (or in transition)
3. Works for private firm or sector
 - CZ,BG: Large joint-stock company, other private company, foundation, co-operative
 - DK: Work for private owned firm, including assisting spouse
 - N: Personal company, limited company
 - RP: Private firm + unpaid family worker
 - RUS: Doesn't work for government or publicly owned firm
4. Self employed
 - CZ: self employed, freelance
 - IRL: incl. farmer
 - RP: self employed, informal sector
5. RUS: employed
6. CH,GB,NIRL,NZ: Non-profit organisations, welfare organisations, voluntary/ charity sector, other
 - DK: Other
9. No answer, don't know, can't choose, refused

What is the current economic status, main source of living of your spouse/ partner?

NIRL: Which of these descriptions applies to what your wife/ husband/ partner was doing last week, that is seven days ending last Sunday? (If on holiday or temporarily sick ask what they are usually are doing)

N: distribution seems influenced by carry-over effect.

See Note No. 2

01. Full-time employed, main job
 A,F,CZ,SLO,J: 35 hours and more
 DK: full-time employed and self employed, 30 hours +
 BR: full-time employed, entrepreneur, self employed
 NZ,S,E: > 35 hours
 BG,GB,IRL: 30 + hours
 RP: 40 + hours
02. Part-time employed, main job
 A,CZ,SLO,J: 15 - 34 hours
 DK: part-time employed and self employed, 10-29 hrs
 E,F,NZ,S: 15 - 35 hours
 BG,DK,GB: 10 - 29 hours
 IRL: less than 30 hours
 RP: 10 - 39 hours
03. Less than part-time
 A,CZ,D,F,J,P,S,RUS: less than 15 hours
 E,SLO,NZ: <15 hours, temporarily out of work
 DK: less than part-time, temporarily out of work because of illness, maternity leave, parents leave
 PL,USA: temporarily out of work
 RP: less than 10 hours
 GB: not asked, partners working less than 10 hrs are coded as not working
 NIRL: not asked
04. Helping family member
05. Unemployed
06. Student, at school, in education, vocational training, on government training scheme
 PL: student, at school
07. Retired
 DK: job release scheme etc. (pension benefits between early retirement and normal retirement), old age retirement
08. Home duties, housewife (man), CZ:+ maternity benefit
09. Permanently disabled, sick
10. Others, not in labour force, not working
 NIRL: not working + not seeking work, caring for elderly and disabled person full-time, other
97. Refused
98. Don't know
99. No answer
00. NAP (not married; no spouse/ partner)

V249 <RINCOME> R: Earnings

Location: 298 MD1: 000000
 Width: 6 MD2: 999997

Respondent's earnings I

- A: Personal net income per month in EURO (midpoints)
 BG: Personal monthly net income in Lev (in thous.)
 BR: R's monthly earnings in RS
 CH: R's monthly earnings from employment in swiss francs (midpoints of the classes)
 The first part of the question asks in a direct form for the income and the second (only asked if R is not willing to respond to the first part) asks if R would at least be willing to give an approximate indication of the income.
 CZ: What is your total average net income per month in CZK? It includes incomes from main job or business, incomes from additional gainful activities or property, rents, social incomes as are unemployment benefits, maternal benefits, allowances, etc. It does not include child allowances and state compensatory benefits for children. (midpoints of the categories)
 CY: R's income in CY pounds (midpoints of the categories)
 D: Monthly net income after the deduction of taxes and social insurance in EURO
 If R refused or didn't answer an additional question with income categories was provided
 DK: What is your total annual gross income before taxes? Annual income before deduction in Dkr (midpoints)
 E: R's monthly earnings in EURO (midpoints)
 F: R's professional income per month in EURO (midpoints)
 FLA: How much is your personal net monthly income, everything included such as salary, retirement pay and other income amount in EURO. In which category is your personal net monthly income. (categories)
 GB: Which of the letters in this card represents your own gross or total earnings per year, before deduction of income tax and national insurance in Pounds (midpoints)
 H: Income per month in Hungarian Forint
 IL: Net income per month in NIS (midpoints)
 J: How much did you earn yourself last year before taxes? (midpoints in thous. Yen)
 LV: Monthly net income in Latvian Lats
 N: Personal gross income before taxes and allowances including retirement benefits etc. in Norwegian kroner
 NIRL: What is your personal income before tax and national insurance contributions? include all income from employment and benefits. Income per annum in Pounds (midpoints of the categories)
 NZ: Which of the following categories best describes your own yearly income from all sources before tax in N.Z.\$? (midpoints of the categories)
 P: R's monthly average net income in EURO (midpoints)
 PL: Taking into consideration the last 12 months, please tell me what was your average monthly income/ earnings from your job or business after taxes in PLN?
 RCH: R's monthly net income in CLP (midpoints)
 RP: R's monthly income in Pesos
 RUS: What is your monthly wage together with all the bonuses, compensations and other payments in new RUR (midpoints)
 S: What is your approximate income per month before taxes in SEK?
 SF: The questionnaire for Swedish speaking Finns did not include question for personal income. Instead, the question for household income had accidentally been duplicated. For Swedish speaking respondents, the variable for personal income contains information only for respondents living in one-person household.
 Income per month in EURO
 SLO: What was your last regular monthly income after taxes and social insurances from all sources in Tolar?
 USA: R's earnings from all jobs in 2000 before taxes or other deductions in \$ (midpoints)

V249 R: Earnings (continued)

000070. RUS: 70 new RUR
000500. J : 500 000 Yen (in thous.)
020000. J : 20 000 000 Yen
025000. RUS: 25 000 new RUR
040000. NIRL: 40 000 Pounds + per annum
059000. GB : 56 000 Pounds +
996000. SLO: 996 000 Tolar and more
999996. N,RCH: >1 000 000
USA: >110 000 Dollar

V252 <HHCYCLE> Household cycle

Location: 312 MD1: 00
 Width: 2 MD2: 99

Household cycle - Household composition

CH: The upper category for the number of adults and the number of children in household was set to respectively '9 adults and more' and '9 children and more'.

CZ: constructed from three variables: No. of members in hh, No. of children 7 to 17 years and No. of children of age of 6 and younger.

DK: Derived from two variables 'number of persons in household' and 'number of adults 18 years and older and less than 18 years'.

IRL: Could you please tell gender, age last birthday and finally the relationship to each other of all members of hh.

NIRL: Derived from age of members of household

NZ: How many children under the age of 16 are in household?

PL: derived from the PGSS 'household members card' collected by interviewer before PGSS/ ISSP interview

S: Adult = 18 years or older; child = 17 years or younger

SLO: A number of persons in HH; B number of children

6 thru 18 years; C number of children below 6 years

RP: Household composition: adults and children (less than 18 years), excluding servants, transients, boarders

If there was a general election tomorrow, which party would you give your vote to?

	Unweighted Abs.	%	% N= 935
01. FF - Soldiers of Destiny-The Republican Party (Fianna Fail; founded in 1926 as a breakaway from Sinn Fein/SF; FF opposed to the Anglo-Irish Treaty of 1921, which created the Irish Free State; in the 1930s FF stood for 'tit for tat' policy by starting an economic war with Britain, in which a mutual placing of tariffs on imports from the respective rival took place; in 1937 FF drew up a new constitution, which claimed that Ireland consists of the entire island; in the 1990s FF played an active role in paving the way for a peace process in Northern Ireland culminating in the 'Good Friday Agreement'; FF is allied with Italy's 'post-fascist' Alleanza Nazionale in the European Parliament; populist, republican, national-conservative party)	450	0.96	48.13
02. FG - Tribe of the Gaels/aka: Family of the Irish (Fine gael; founded in 1933 as a merger of the Centre Party, Cumann na nGaedhael/Society of the Gaels/CG and the Blueshirts; FG was formed by the faction who was in favour of the Anglo-Irish Treaty of 1921, which created the Irish Free State and divided the island in the Republic of Ireland (1948) and Northern Ireland; centre-right, christian-democratic party)	176	0.38	18.82
03. LAB - Irish Labour Party (Pairti Lucht Oibre; founded in 1912 at a conference of the Irish Trade Union Congress; the Anglo-Irish treaty of 1921 divided the LAB when some extreme socialists sided with FF; in the 1990s LAB played an active role in contributing to the peace process; in 1997 LAB merged with Democratic Left, keeping its name; LAB is the sister party of the Northern Irish SDLP/Social Democratic and Labour Party; social-democratic party)	80	0.17	8.56
05. PD - Progressive Democrats (Dan Pairty Daonlathach; founded in 1985 as a split from FF; PD aims to combine right-wing economic policies with liberal social policies; 'low-tax', liberal party)	35	0.08	3.74
06. GP - Green Party (Comhaontas Glas; founded in 1982 as Ecology Party of Ireland, renamed into its current name in 1987; GP aims to be an open, non-hierarchical party, which finds expression in the party's structure: the party has no leaders with all positions within it rotating after one year; GP has strong links with the Northern Irish Green Party; eurosceptical, ecologist-green party)	43	0.09	4.60
07. SF - We Ourselves (Sinn Fein; founded in 1905; SF was originally founded as an Irish separatist monarchist party, in 1917 it moved to an Irish republican party; SF subsequently underwent successive splits (1922, 1926, 1970) from which emerged a range of parties (Cumann na nGaedhael, Fianna Fail; Official Sinn Fein, Sinn Fein-The Workers' Party, Workers' Party); Except LAB and GP, all of Ireland's parties has direct or indirect historical links to SF; in the 1960s the party moved to the left; in the 1970s a further split into marxist Official Sinn Fein and traditional republican Provisional Sinn Fein occurred; OSF evolved into Workers' Party and Democratic Left, whereas PSF is often referred to as the political arm of the militant Irish Republican Army/IRA conducting terrorist actions in Northern Ireland, though SF officially initiated steps towards moving SF away from violence and decommissioning of arms by the IRA; SF exists as well in IRL as in NIRL; extreme-left party)	43	0.09	4.60
95. Other Party	53	0.11	5.67
96. Would not vote; no party preference	55	0.12	5.88
98. Can't choose	260	0.56	.

V358 <URBRURAL> Type of community: urban-rural self-ass

Location: 523 MD1: 0
 Width: 1 MD2: 9

Urban/rural - Type of residence

A: Where do you live - type of residence
 BG: Type of community
 CZ: How can be best described the area where you live?
 CH: Which category describes the area where you live?
 DK: The variable is derived from respondents' own answers to a question about what type of city they live in. It is, thus, a subjective assessment.
 E: Constructed together with size of communities
 IRL: Size of location in which household is situated
 N: Municipality type
 NZ: Do you live in a rural or urban area?
 S: R living in urban or rural area
 SF: Added and recoded from register data describing type of municipality; not included in the questionnaire
 USA: Expanded NORC size code

See Note No. 3

1. Urban area, a big city
 BG : sofia
 NL,RCH,SLO: urban
 RP : total urban
 SF : urban municipalities
 TWN: large cities
2. Suburbs of a big city /large town
 BG: big town
 NL,P: suburban
 SF: semi urban municipalities
 TWN: medium cities
3. Town or small city
 BG: small town
 F: semi-urban, semi-rural
 NIRL,S: suburbs or outskirts of a big city;
 a small city or town
 TWN: small cities, town
4. Country village
 BG: village
 F,BR,NL,P,RCH,S: rural
 SF: rural municipalities
 TWN: rural areas
5. Farm or home in the country
 NIRL: country village, farm or home in the country
 RP: total rural
- 6 CZ: other
9. No answer
0. Not available: D,IL,PL,RUS
 D: variable omitted by mistake in the national dataset
 GB: not available for half the sample

V360 <MODE> Administrative mode of data-collection

Location: 526 MD1: 00
 Width: 2 MD2: 99

Administrative mode of data collection

CH: Two different modes, because the ISSP survey was combined with another survey, the survey 'Eurobarometer in Switzerland' see 'study description'

NIRL: The background questions were asked using CAPI. However, the ISSP questions were asked using a self completion questionnaire. The self completion form is either completed and handed back to the interveiwer at the time of the main interview, or the interviewer called back at a later stage to collect it.

PL: 81,1% of interviews has been collected using self-completion mode and 18,4% on the request of R - using face-to-face mode.

USA: Since ISSP response category does not provide the appropriate option for 'self-completion and computer-assisted' with which USA GSS survey is performed, we created a new response category 40 for this.

-
- 10. Face-to-face, paper and pencil, no visuals
 - 11. Face-to-face, paper and pencil, visuals
 - 12. Face-to-face, paper and pencil, Respondent reading questionnaire
 - 13. Interpreter or translator, no visuals
 - 14. Interpreter or translator, visuals
 - 20. Face-to-face, computer-assisted, no visuals
 - 21. Face-to-face, computer-assisted, visuals
 - 22. Face-to-face, computer-assisted, Respondent reading questionnaire (paper or on monitor)
 - 23. Interpreter or translator, no visuals
 - 24. Interpreter or translator, visuals
 - 30. Self-completion, paper and pencil, Arrives with interviewer, interviewer attending
 NIRL: Self-completion, paper and pencil, interviewer attending
 - 31. Drop-off, pick up later
 D,GB,NL: Self-completion, interviewer pick up later
 - 32. Drop-off, mailed back by Respondent
 CH: Self-completion, paper interview, mailed back by Respondent
 - 33. Mailed to, complete and hold for pick up
 - 34. Self-completion, paper and pencil, mailed to mailed back by Respondent
 - 40. Self-completion, computer-assisted
 - 50. Telephone, paper and pencil, no visuals
 - 51. Telephone, paper and pencil, visuals
 - 52. Telephone, paper and pencil, respondent reading questionnaire
 DK: Telephone interview after mailing, where the interviewer read out the questionnaire and noted the respondents' answers
 - 99. No answer

V361 <WEIGHT> Weighting factor

Location: 528
Width: 7 Decimal Places: 5

Weighting factor

A,BG,CH,CZ,D,GB,NIRL,P,RP,RCH,SF: documentation of the construction of the total weight see 'study description'.
CZ: Total weight is constructed from 1. design weights based on proportion of household sizes, 2. post-stratification weights based on region, sex, education, age, economical activity and size of community. The weights were derived from data of the Czech Statistical Office (Census 2001).
Method: ranking based on loglinear modelling.
SF: weight_2 included in the dataset

01. No weighting

V362 <VERSION> Version of the dataset

Location: 535
Width: 2 Decimal Places: 1

Version of the release of the dataset and documentation

1.0 September, 2004

Note 0001

This Note refers to V241 and V247 and contains the International Occupation Codes of 1988 and some additional country specific codings used in Germany, Hungary, Norway, Poland, United States.

- 4132 Production clerks
- 4133 Transport clerks
- 4140 Library, mail and related clerks
- 4141 Library and filing clerks
- 4142 Mail carriers and sorting clerks
- 4143 Coding, proof-reading and related clerks

Note 0001

(continued)

4144 Scribes and related workers
 4190 Other office clerks, DK: including assisting spouse
 4200 Customer services clerks
 4210 Cashiers, tellers and related clerks
 4211 Cashiers and ticket clerks
 4212 Tellers and other counter clerks
 4213 Bookmakers and croupiers
 4214 Pawnbrokers and money-lenders
 4215 Debt-collectors and related workers
 4220 Client information clerks
 4221 Travel agency and related clerks
 4222 Receptionists and information clerks
 4223 Telephone switchboard operators
 4290 CY: Other customer services clerks
 4300 Office helping workers
 4400 Post office
 4500 Railway official, higher civil service

Service workers and shop and market sales workers

5000 Personal service, sale
 5100 Personal and protective services workers
 5110 Travel attendants and related workers
 5111 Travel attendants and travel stewards
 5112 Transport conductors
 5113 Travel guides
 5120 Housekeeping and restaurant services workers
 5121 Housekeepers and related workers
 5122 Cooks
 5123 Waiters, waitresses and bartenders
 5130 Personal care and related workers
 5131 Child care workers
 5132 Institution-based personal care workers
 5133 Home-based personal care workers
 5139 Personal care and related workers not elsewhere classified
 5140 Other personal services workers
 5141 Hairdressers, barbers, beauticians and related workers
 5142 Companions and valets
 5143 Undertakers and embalmers
 5149 Other personal services workers not elsewhere classified
 5150 Astrologers, fortune-tellers and related workers
 5151 Astrologers and related workers
 5152 Fortune-tellers, palmists and related workers
 5160 Protective services workers
 5161 Fire-fighters
 5162 Police officers
 5163 Prison guards
 5169 Protective services workers not elsewhere classified
 5200 Models, salespersons and demonstrators
 5210 Fashion and other models
 5220 Shop salespersons and demonstrators
 5230 Stall and market salespersons

Skilled agricultural and fishery workers

6000 Skilled agricultural and fishery worker
 6100 Market-oriented skilled agricultural and fishery workers
 6110 Market gardeners and crop growers
 6111 Field crop and vegetable growers
 6112 Tree and shrub crop growers
 6113 Gardeners, horticultural and nursery growers
 6114 Mixed-crop growers
 6120 Market-oriented animal producers and related workers
 6121 Dairy and livestock producers
 6122 Poultry producers
 6123 Apiarists and sericulturists
 6124 Mixed animal producers
 6129 Market-oriented animal producers and related workers not elsewhere classified
 6130 Market-oriented crop animal producers
 6140 Forestry and related workers
 6141 Forestry workers and loggers
 6142 Charcoal burners and related workers

Note 0001

(continued)

- 6150 Fishery workers, hunters and trappers
- 6151 Aquatic-life cultivation workers
- 6152 Inland and coastal waters fishery workers
- 6153 Deep-sea fishery workers
- 6154 Hunters and trappers

- 6200 Subsistence agricultural and fishery workers
- 6210 Subsistence agricultural and fishery workers

Craft and related trades workers

- 7000 Craft and trade workers
- 7006 CY: Supervisors and general foremen (manufacturing and installation of electrical and electronical equipment)
- 7008 CY: Supervisors and general foremen (production and clothing manufacturing)
- 7100 Extraction and building trades workers
- 7110 Miners, shotfirers, stone cutters and carvers
- 7111 Miners and quarry workers
- 7112 Shotfirers and blasters
- 7113 Stone splitters, cutters and carvers
- 7120 Building frame and related trades workers
- 7121 Builders, traditional materials
- 7122 Bricklayers and stonemasons
- 7123 Concrete placers, concrete finishers and related workers
- 7124 Carpenters and joiners
- 7129 Building frame and related trades workers not elsewhere classified
- 7130 Building finishers and related trades workers
- 7131 Roofers
- 7132 Floor layers and tile setters
- 7133 Plasterers
- 7134 Insulation workers
- 7135 Glaziers
- 7136 Plumbers and pipe fitters
- 7137 Building and related electricians
- 7139 Building finishers and related workers
- 7140 Painters, building structure cleaners and related workers
- 7141 Painters and related workers
- 7142 Varnishers and related painters
- 7143 Building structure cleaners

- 7200 Metal, machinery and related trades workers
- 7210 Metal moulders, welders, sheetmetal workers, structural-metal preparers, and related trades workers
- 7211 Metal moulders and coremakers
- 7212 Welders and flamecutters
- 7213 Sheet-metal workers
- 7214 Structural-metal preparers and erectors
- 7215 Riggers and cable splicers
- 7216 Underwater workers
- 7220 Blacksmiths, tool-makers and related trades workers
- 7221 Blacksmiths, hammer-smiths and forging-press workers
- 7222 Tool-makers and related workers
- 7223 Machine-tool setters and setter-operators
- 7224 Metal wheel-grinders, polishers and tool sharpeners
- 7230 Machinery mechanics and fitters
- 7231 Motor vehicle mechanics and fitters
- 7232 Aircraft engine mechanics and fitters
- 7233 Agricultural- or industrial-machinery mechanics and fitters
- 7240 Electrical and electronic equipment mechanics and fitters
- 7241 Electrical mechanics and fitters
- 7242 Electronics fitters
- 7243 Electronics mechanics and servicers
- 7244 Telegraph and telephone installers and servicers
- 7245 Electrical line installers, repairers and cable jointers

- 7300 Precision, handicraft, printing and related trades workers
- 7310 Precision workers in metal and related materials
- 7311 Precision-instrument makers and repairers
- 7312 Musical-instrument makers and tuners
- 7313 Jewellery and precious-metal workers

Note 0001

(continued)

7320 Potters, glass-makers and related trades workers
 7321 Abrasive wheel formers, potters and related workers
 7322 Glass-makers, cutters, grinders and finishers
 7323 Glass engravers and etchers
 7324 Glass, ceramics and related decorative painters
 7330 Handicraft workers in wood, textile, leather and related materials
 7331 Handicraft workers in wood and related materials
 7332 Handicraft workers in textile, leather and related materials
 7340 Printing and related trades workers
 7341 Compositors, typesetters and related workers
 7342 Stereotypers, and electrotypers
 7343 Printing engravers and etchers
 7344 Photographic and related workers
 7345 Bookbinders and related workers
 7346 Silk-screen, block and textile printers

 7400 Other craft and related trades workers
 7410 Food processing and related trades workers
 7411 Butchers, fishmongers and related food preparers
 7412 Bakers, pastry-cooks and confectionary makers
 7413 Dairy-products makers
 7414 Fruit, vegetable and related preservers
 7415 Food and beverage tasters and graders
 7416 Tobacco preparers and tobacco products makers
 7420 Wood treaters, cabinet-makers and related trades workers
 7421 Wood treaters
 7422 Cabinet-makers and related workers
 7423 Woodworking-machine setters and setter-operators
 7424 Basketry weavers, brush makers and related workers
 7430 Textile, garment and related trades workers
 7431 Fibre preparers
 7432 Weavers, knitters and related workers
 7433 Tailors, dressmakers and hatters
 7434 Furriers and related workers
 7435 Textile, leather and related pattern-makers and cutters
 7436 Sewers, embroiderers and related workers
 7437 Upholsterers and related workers
 7440 Pelt, leather and shoemaking trades workers
 7441 Pelt dressers, tanners and fellmongers
 7442 Shoe-makers and related workers
 7500 Metal worker general
 CZ: Generic skilled manual worker
 7510 Metal worker n.e.c.
 7520 Electronics engineers n.e.c.
 7900 Master craftsman, supervisor

Plant and machine operators and assemblers

8000 Stationary-plant and related operators
 8100 Stationary-plant and related operators
 8110 Mining- and mineral-processing-plant operators
 8111 Mining-plant operators
 8112 Mineral-ore and stone-processing-plant operators
 8113 Well drillers and borers and related workers
 8120 Metal-processing-plant operators
 8121 Ore and metal furnace operators
 8122 Metal melters, casters and rolling-mill operators
 8123 Metal-heat-treating-plant operators
 8124 Metal drawers and extruders
 8130 Glass, ceramics and related plant operators
 8131 Glass and ceramics kiln and related machine operators
 8139 Glass, ceramics and related plant operators not elsewhere classified
 8140 Wood-processing- and papermaking-plant operators
 8141 Wood-processing-plant operators
 8142 Paper-pulp plant operators
 8143 Papermaking-plant operators
 8150 Chemical-processing-plant operators
 8151 Crushing-, grinding- and chemical-mixing-machinery operators
 8152 Chemical-heat-treating-plant operators
 8153 Chemical-filtering- and separating-equipment operators
 8154 Chemical-still and reactor operators (except petroleum and natural gas)

Note 0001

(continued)

8155 Petroleum- and natural-gas-refining-plant operators
8159 Chemical-processing-plant operators not elsewhere classified
8160 Power-production and related plant operators
8161 Power-production plant operators
8162 Steam-engine and boiler operators
8163 Incinerator, water-treatment and related plant operators
8170 Automated-assembly-line and industrial-robot operators
8171 Automated-assembly-line operators
8172 Industrial-robot operators

8200 Machine operators and assemblers
8210 Metal- and mineral-products machine operators
8211 Machine-tool operators
8212 Cement and other mineral products machine operators
8220 Chemical-products machine operators
8221 Pharmaceutical- and toiletry products machine operators
8222 Ammunition- and explosive-products machine operators
8223 Metal finishing-, plating- and coating-machine operators
8224 Photographic-products machine operators
8229 Chemical-products machine operators not elsewhere classified
8230 Rubber- and plastic-products machine operators
8231 Rubber-products machine operators
8232 Plastic-products machine operators
8240 Wood-products machine operators
8250 Printing-, binding- and paper-products machine operators
8251 Printing-machine operators
8252 Bookbinding-machine operators
8253 Paper-products machine operators
8260 Textile-, fur- and leather-products machine operators
8261 Fibre-preparing-, spinning- and winding-machine operators
8262 Weaving- and knitting-machine operators
8263 Sewing-machine operators
8264 Bleaching-, dyeing- and cleaning-machine operators
8265 Fur- and leather-preparing-machine operators
8266 Shoemaking- and related machine operators
8269 Textile-, fur- and leather-products machine operators not elsewhere classified
8270 Food and related products machine operators
8271 Meat- and fish-processing-machine operators
8272 Dairy-products machine operators
8273 Grain- and spice-milling-machine operators
8274 Baked-goods, cereal and chocolate-products machine operators
8275 Fruit-, vegetable- and nut-processing-machine operators
8276 Sugar production machine operators
8277 Tea-, coffee-, and cocoa-processing-machine operators
8278 Brewers-, wine and other beverage machine operators
8279 Tobacco production machine operators
8280 Assemblers
8281 Mechanical-machinery assemblers
8282 Electrical-equipment assemblers
8283 Electronic-equipment assemblers
8284 Metal-, rubber- and plastic-products assemblers
8285 Wood and related products assemblers
8286 Paperboard, textile and related products assemblers
8287 Composite products assemblers
8290 Other machine operators and Assemblers

8300 Drivers and mobile-plant operators
8310 Locomotive-engine drivers and related workers
8311 Locomotive-engine drivers
8312 Railway brakemen, signallers and shunters
8320 Motor-vehicle drivers
8321 Motor-cycle drivers
8322 Car, taxi and van drivers
8323 Bus and tram drivers

Note 0001

(continued)

8324 Heavy truck and lorry drivers
 8330 Agricultural and other mobile-plant operators
 8331 Motorised farm and forestry plant operators
 8332 Earth-moving- and related plant operators
 8333 Crane, hoist and related plant operators
 8334 Lifting-truck operators
 8340 Ship's deck crews and related workers

Elementary occupations

9000 Elementary occupations, unskilled workers
 9100 Sales and services elementary occupations
 9110 Street vendors and related workers
 9111 Street food vendors
 9112 Street vendors, non-food products
 9113 Door-to-door and telephone salespersons
 9120 Shoe cleaning and other street services elementary occupations
 9130 Domestic and related helpers, cleaners and launderers
 9131 Domestic helpers and cleaners
 9132 Helpers and cleaners in offices, hotels and other establishments
 9133 Hand-launderers and pressers
 9140 Building caretakers, window and related cleaners
 9141 Building caretakers
 9142 Vehicle, window and related cleaners
 9150 Messengers, porters, doorkeepers and related workers
 9151 Messengers, package, and luggage porters and deliverers
 9152 Doorkeepers, watchpersons, and related workers
 9153 Vending-machine money collectors, meter readers and related workers
 9160 Garbage collectors and related labourers
 9161 Garbage collectors
 9162 Sweepers and related labourers

9200 Agricultural, fishery and related labourers
 9210 Agricultural, fishery and related labourers
 9211 Farm-hands and labourers
 9212 Forestry labourers
 9213 Fishery, hunting and trapping labourers

9300 Labourers in mining construction manufacturing and transport
 9310 Mining and construction labourers
 9311 Mining and quarrying labourers
 9312 Construction and maintenance labourers: roads, dams and similar constructions
 9313 Building construction labourers
 9320 Manufacturing labourers
 9321 Assembling labourers
 9322 Hand packers and other manufacturing labourers
 9330 Transport labourers and freight handlers
 9331 Hand or pedal vehicle drivers
 9332 Drivers of animal-drawn vehicles and machinery
 9333 Freight handlers

7450 Laboratory assistants
8132 Operators in insulation glass production
8341 Deck crew (ship)
8342 Engine crew (ship)
9134 Kitchen and serving assistants

Note 0002

This Note refers to V239 and V246 and contains special remarks to the working status of Respondent and Spouse.

Denmark

General comment on coding

Data is scanned, which means that data was not cleaned in the raw dataset. In the dataset delivered to the ISSP database data are coded so that they follow the filters in the survey, regardless of whether respondents have ignored the filters and answered a question they shouldn't have answered according to the filters. In other words: Only respondents who have answered 'positively' on a filter-question are included as relevant in the questions that relate to the filter in question.

Example: Only respondents who have answered 1-4 in WRKST are included as relevant in WRKHRS, WRKGOVT etc. Respondents who have answered 5-99 in WRKST are coded as irrelevant in these variables.

WRKST

The ISSP categories have been derived from a question including more answer categories. The categories are coded as follows:

01. Employed full time
Employee, full time, 30 hours or more per week
Self-employed
02. Employed part time
Employee, part time, 10-29 hours per week
03. Employed less than part time or temporarily out of work
Employee, less than 10 hours per week
Temporarily out of job because of illness or the like
Temporarily out of job because of leave from job (maternity leave, parental leave, education leave)
04. Helping family member
Assisting spouse
05. Unemployed
Unemployed (including on leave from unemployment)
06. Student, in school or vocational training
Trainee or apprentice (with wage)
Pupil (without wage)
Student (without wage)
07. Retired
Job release scheme (pensions benefit payable between early retirement and normal retirement pension, and the like)
Other retirement (old-age etc.)
08. Housewife or home duties
Housewife/ home duties
09. Permanently disabled
On disability pension
10. Others not in labour force
Other, outside labour force
99. No answer

SPWRKST

The ISSP categories have been derived from a question including more answer categories. The categories are coded as follows:

Note 0002

(continued)

- 00. NAP (Code 2-9 in MARITAL and Code 2,9 in COHAB) (28,3%)
- 01. Employed full time (44,3%)
 - Employee, full time, 30 hours or more per week (40,2%)
 - Self-employed (4,1%)
- 02. Employed part time (2,2%)
 - Employee, part time, 10-29 hours per week (2,2%)
- 03. Employed less than part time or temporarily out of work (2,2%)
 - Employee, less than 10 hours per week (0,2%)
 - Temporarily out of job because of illness or the like (0,7%)
 - Temporarily out of job because of leave from job (maternity leave, parental leave, education leave) (1,3%)
- 04. Helping family member (0,6%)
 - Assisting spouse (0,6%)
- 05. Unemployed (3,0%)
 - Unemployed (including on leave from unemployment)
- 06. Student, in school or vocational training (3,6%)
 - Trainee or apprentice (with wage) (0,7%)
 - Pupil (without wage) (0,1%)
 - Student (without wage) (2,8%)
- 07. Retired (9,3%)
 - Job release scheme (pensions benefit payable between early retirement and normal retirement pension, and the like) (4,6%)
 - Other retirement (old-age etc.) (4,7%)
- 08. Housewife or home duties (0,7%)
 - Housewife/ home duties (0,7%)
- 09. Permanently disabled (3,6%)
 - On disability pension (3,6%)
- 10. Others not in labour force (0,2%)
 - Other, outside labour force (0,2%)
- 99. No answer (2,2%)

Note 0003

This Note refers to V357, V358 and contains specific explanations about size and type of the place of residence.

United States

NORC size of place

Source: GSS Methodological Report No.4.

Within an SMSA and --

- 01 A large central city (over 250.000)
- 02 A medium size central city (50.000 to 250.000)
- 03 A suburb of a large central city (a)
- 04 A suburb of a medium size central city
- 05 An unincorporated area of a large central city (division, township, etc.)
- 06 An unincorporated area of a medium central city

Not within an SMSA, (within a country) and --

- 07 A small city (10.000 to 49.999) (b)
- 08 A town or village (2.500 to 9.999)
- 09 An incorporated area less than 2.500 or an unincorporated area of 1.000 to 2.499 (c)
- 10 Open country within larger civil divisions, e.g. township, division

Remarks:

- (a) A suburb is defined as any incorporated area or unincorporated area of 1.000+ (or listed as such in the U.S. Census PC (1)-A books) within the boundaries of an SMSA but not within the limits of a central city of the SMSA. Some SMSAs have more than one central city, e.g., Minneapolis-St. Paul. In these cases, both cities are coded as central cities.
- (b) If such an instance were to arise, a city of 50.000 or over which is not part of an SMSA would be coded '07'.
- (c) Unincorporated areas of over 2.499 are treated as incorporated areas of the same size. Unincorporated areas under 1.000 are not listed by the Census and are treated here as part of the next larger civil division, usually the township.

Note 0004
